Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

1. Reorient or relocate the receiving antenna.
2. Increase the separation between the equipment and receiver.
3. Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
4. Consult the dealer or an experienced radio technician for help.

FCC Caution:

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. To assure continued compliance, for example, use only shielded interface cables when connecting to computer or peripheral devices.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference
- (2) This device must accept any interference received, including interference that may cause undesired operation.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Operations in the 5.15-5.25GHz band are restricted to indoor usage only.

FCC Radiation Exposure Statement

This equipment complies with FCC radiation exposure set forth for an uncontrolled environment. In order to avoid the possibility of exceeding the FCC radio frequency exposure limits, human proximity to the antenna shall not be less than 20 cm (8 inches) during normal operation.

CE Compliance Statement

This device meets the RED 2014/53/EU requirements on the limitation of exposure of the general public to electromagnetic fields by way of health protection. The device complies with RF specifications when it is used at a safe distance of 20 cm from your body.

Safety

This equipment is designed with the utmost care for the safety of those who install and use it. However, special attention must be paid to the dangers of electric shock and static electricity when working with electrical equipment. All guidelines of this and of the computer manufacture must therefore be allowed at all times to ensure the safe use of the equipment.

WEEE regulation

To avoid the potential effects on the environment and human health as a result of the presence of hazardous substances in electrical and electronic equipment, end users of electrical and electronic equipment should understand the meaning of the crossed-out wheeled bin symbol. Do not dispose of WEEE as unsorted municipal waste and have to collect such WEEE separately.

Härmed intygar, PLANET Technology Corporation, att denna 11ac Wireless AP står i överensstämmelse med de väsentliga egenskapskrav och övriga relevanta bestämmelser som framgår av direktiv 2014/53/EU. 128

Chapter 1. Product Introduction

1.1 Package Contents

Thank you for choosing PLANET WDAP-C1800AX Wireless AP. Please verify the contents inside the package box.

Package Contents of WDAP-1800AX

WDAP-1800AX	Quick Guide	L-type Bracket x 1
		
Screw Set x 1	U-bolt Kit x 2	RJ45 Waterproof Kit x 1
		

If any of the above items are missing, please contact your dealer immediately.

1.2 Product Description

(Please refer to PLANET website for WDAP-1800AX & WDAP-W1800AXU information.)

Ultra-high-speed Wi-Fi 6 Wireless LAN Solution

PLANET WDAP-C1800AX **1800Mbps Dual Band 802.11ax Wireless AP**, supporting **MU-MIMO, OFDMA, Seamless Roaming, Beamforming and BSS Coloring technology**, provides a maximum wireless speed of 1200Mbps in the 5GHz band and 600Mbps in the 2.4GHz band. The maximum number of client users is up to 150, ensuring more secure and robust connectivity with the adoption of Wi-Fi 6 technology.

Benefits of MU-MIMO, OFDMA, Seamless Roaming, Beamforming and BSS Coloring

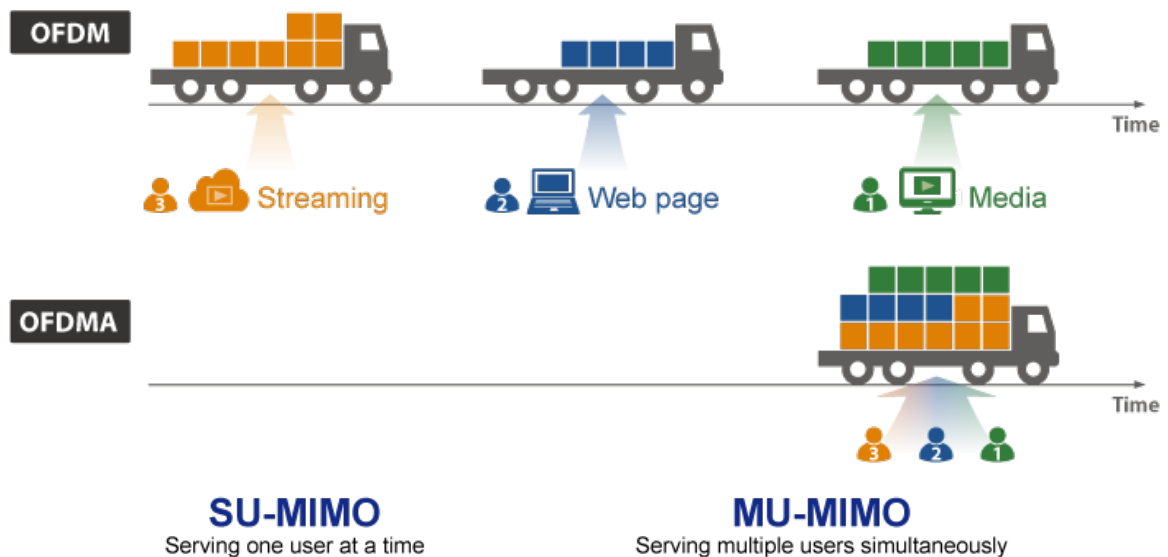

The WDAP-C1800AX can be installed in public areas such as hotspots, airports and conferences as OFDMA, a multi-user version of OFDM, enables the concurrent AP to communicate (uplink and downlink) with multiple clients by assigning subsets of subcarriers called resource units (RUs) to the individual clients. With MU-MIMO and Seamless Roaming technologies, it provides a better Wi-Fi user experience, reducing the likelihood of users turning off Wi-Fi and putting more load on the cellular network.

Beamforming is to improve your Wi-Fi signal when you are far away from your router. The BSS color is a numerical identifier of the BSS. 802.11ax radios that are able to differentiate between BSSs using BSS color identifier when other radios transmit on the same channel. These technologies also can solve Wi-Fi congestion issues in open work spaces and conference rooms. The WDAP-C1800AX can offer more powerful throughput coverage of up to 150 client users.

OFDMA (Orthogonal Frequency Division Multiple Access) Benefits

- Helps transmit small and large packets together to reduce bandwidth burden and improve data transmission performance
- Transmitting data at the same time can effectively reduce the transmission delay for longer frame and low-speed transmission.
- Improves the overall traffic quality, and effectively uses bandwidth in an environment where multiple people use the Internet.
- Increases the number of devices that can be connected to the AP.
- Reduces the power consumption of the device by way of the use of low bandwidth.

A **75%** Reduction in Delays

Beamforming

Beamforming is to improve your Wi-Fi signal when you are far away from your router. Wi-Fi beam forming narrows the focus of the router signal, sending it directly to your devices in a straight line, thus minimizing surrounding signal interference and increasing the strength of the signal that ultimately brings you the following benefits:

- Extend your Wi-Fi coverage
- Deliver a more stable Wi-Fi connection
- Deliver better Wi-Fi throughput
- Reduce router interference

Dedicated and stable signals

Signal loss

■ BSS Coloring

The BSS color is a numerical identifier of the BSS. 802.11ax radios that are able to differentiate between BSSs using BSS color identifier when other radios transmit on the same channel. If the color is the same, this is considered to be an intra-BSS frame transmission. In other words, the transmitting radio belongs to the same BSS as the receiver. If the detected frame has a different BSS color from its own, then the STA considers the frame as an inter-BSS frame from an overlapping BSS.

WPA3 Next Generation Security for Your WLAN Solution

WPA3 is the next generation Wi-Fi security technology that provides the most advanced security protocol to the market. WPA3 makes your connection more secure by preventing hackers from easily cracking your password no matter how simplified the password is. WPA3 can also provide more reliable

password-based authentication, so it can better protect the security of individual users.

* WDAP-C1800AX only supports WPA3-Personal.

Super Power Dual band WLAN Solution

PLANET WDAP-C1800AX, adopting the IEEE 802.11ax Wi-Fi 6 standard, provides a high-speed transmission. The maximum wireless speed in 2.4GHz band is up to 11AX of 574Mbps, and in the 5GHz band is up to 11AX of 1201Mbps. Both the **2.4GHz and 5GHz** wireless connections can also be used simultaneously.

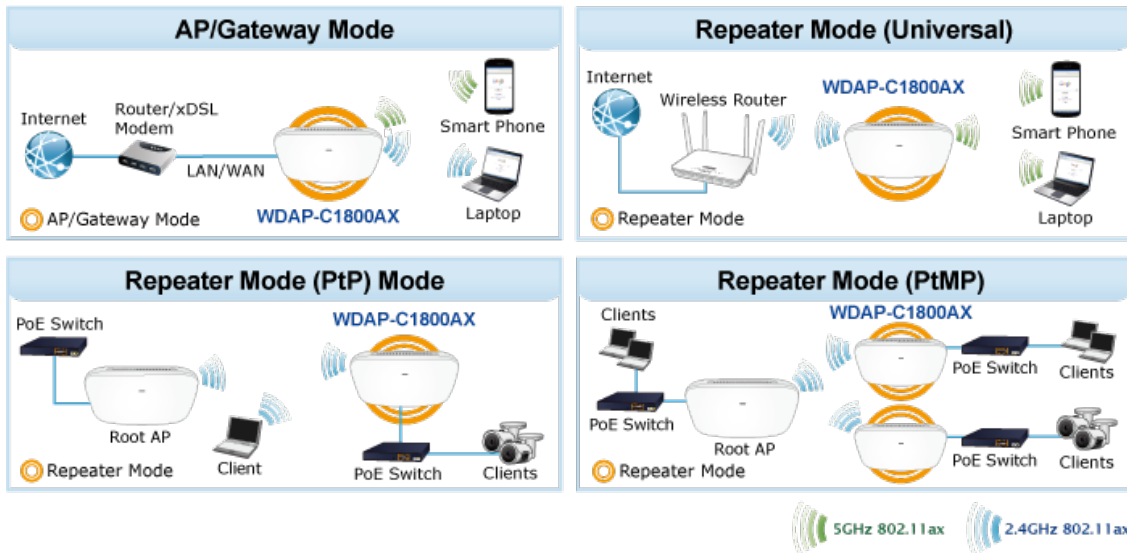

Advanced Security and Rigorous Authentication

The WDAP-C1800AX supports WPA/WPA2/WPA3 wireless encryptions, WPA2 Enterprise, and WPA/WPA2 Enterprise, which can effectively prevent eavesdropping by unauthorized users or bandwidth occupied by unauthenticated wireless access. Furthermore, any users are granted or denied access to the wireless LAN network based on the ACL (Access Control List) that the administrator pre-established.

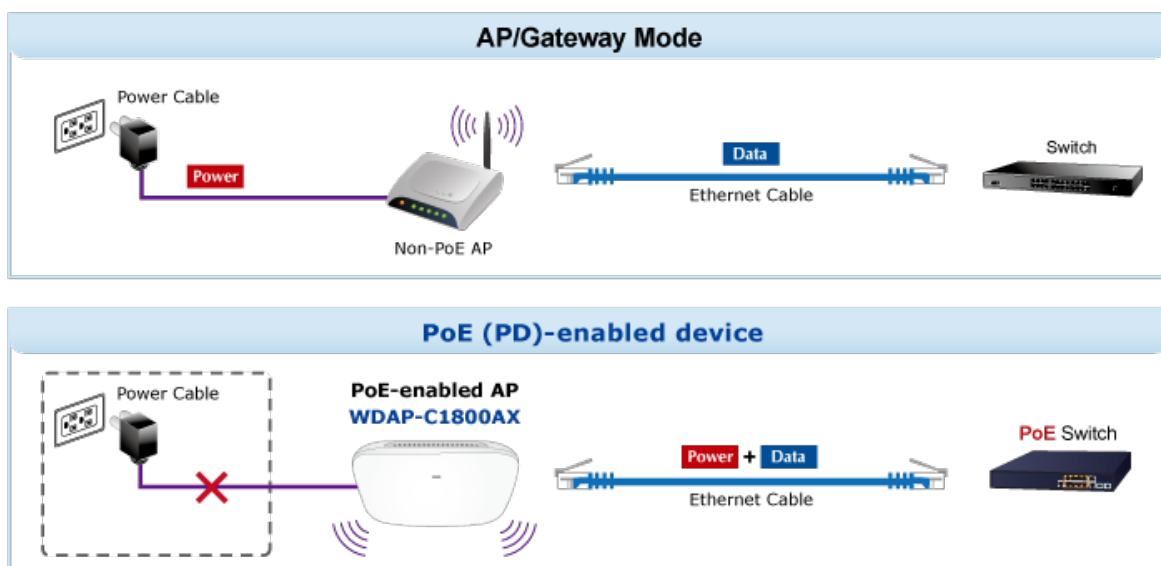

Multiple Operation Modes for Various Applications

The WDAP-C1800AX supports the simplified usage modes of AP, Gateway and Repeater, through which they provide more flexibility for users when wireless network is established. Compared with general wireless access points, the WDAP-C1800AX offers more powerful and flexible capability for wireless clients.

Ceiling-mount Design for Your Environment

With the standard IEEE802.3at Power over Ethernet (PoE) design, the WDAP-C1800AX can be easily installed in the areas where power outlets are not available. By supporting the standard IEEE 802.3at PoE PD power scheme, the WDAP-C1800AX can be powered and networked by a single UTP cable, effectively eliminating the needs of dedicated electrical outlets on the ceiling and reducing the cabling cost. Furthermore, the system administrator is able to arrange the PoE schedule of the WDAP-C1800AX by working with the managed PoE switch.

Optimized Efficiency in AP Management

The brand-new GUI configuration wizard helps the system administrator easily set up the WDAP-C1800AX step by step. Besides, the built-in Wi-Fi analyzer provides real-time channel utilization to prevent channel overlapping to assure greater performance. With the automatic transmission power mechanism, distance control and scheduling reboot setting, the WDAP-C1800AX is easy for the administrator to deploy and manage without on-site maintenance. Moreover, you can use PLANET NMS-500 or NMS-1000V AP control function to deliver wireless profiles to multiple APs simultaneously, thus making the central management simple.

1.3 Product Features

(Please refer to [PLANET website](#) for WDAP-1800AX & WDAP-W1800AXU information.)

➤ Industrial Compliant Wireless LAN

- Compliant with the IEEE 802.11a/b/g/n/ac/ax wireless technology
- Equipped with 10/100/1000Mbps RJ45 ports, and auto MDI/MDI-X

➤ RF Interface Characteristics

- 802.11ax 2T2R architecture with data rate of up to 1800Mbps (600Mbps in 2.4GHz and 1200Mbps in 5GHz)
- High output power with multiply-adjustable transmit power control

➤ Multiple Operation Modes and Wireless Features

- Multiple operation modes: AP, gateway and repeater
- Supports OFDMA (orthogonal frequency division multiple access)
- Supports MU-MIMO (multi-user multiple-input multiple-output), Beamforming and BSS Coloring
- WMM (Wi-Fi multimedia) provides higher priority to multimedia transmitting over wireless
- Coverage threshold to limit the weak signal of clients occupying session
- Real-time Wi-Fi channel analysis chart and client limit control for better performance
- Support Terminal Seamless Roaming with 802.11k, 802.11v, and 802.11r

➤ Secure Network Connection

- Full encryption supported: WPA3 Personal, WPA2/WPA3 Personal, WPA2 Personal (AES), WPA2 Personal (TKIP), WPA2 Personal (TKIP+AES), WPA/WPA2 Personal (AES), WPA/WPA2 Personal (TKIP), WPA/WPA2 Personal (TKIP+AES), WPA2 Enterprise and WPA/WPA2 Enterprise
- Supports 802.1Q port VLAN
- Supports IP/Port/MAC address/URL filtering, DoS, SPI firewall
- Supports DMZ and port forwarding
- Bandwidth control per IP address to increase network stability

➤ Easy Deployment and Management

- Supports PLANET AP Controllers in AP mode
- Easy discovery by PLANET Smart Discovery
- Self-healing mechanism through system auto reboot setting
- System status monitoring through remote syslog server
- Gateway mode supports PLANET DDNS/Easy DDNS, Captive Portal, RADIUS Server/Client

1.4 Product Specifications

Product	WDAP-C1800AX Dual Band 802.11ax 1800Mbps Ceiling-mount Wireless Access Point
Hardware Specifications	
Interfaces	LAN 2 x 10/100/1000BASE-T RJ45 port Auto-negotiation and auto MDI/MDI-X
Antennas	Gain: 4 x Internal 4dBi antenna (2.4G x2, 5G x2)
Reset Button	Reset button on the rear side (Press over 5 seconds to reset the device to factory default)
LED Indicators	Power, SYS
Dimensions (W x D x H)	186 x 186 x 35.8 mm
Weight	380 ± 5g
Power Requirements	48V DC IN, 0.5A, IEEE 802.3at PoE+ (WAN/PoE were changed port) 12V DC IN, 2.0A from DC Jack (5.5 x 2.1mm)
Power Consumption	< 15W
Mounting	Ceiling Mount
Wireless Interface Specifications	
Standard	IEEE 802.11ax IEEE 802.11ac IEEE 802.11n IEEE 802.11a IEEE 802.11b IEEE 802.11g IEEE 802.11i IEEE 802.3 10BASE-T IEEE 802.3u 100BASE-TX IEEE 802.3ab 1000BASE-T IEEE 802.3x flow control IEEE 802.11k, 802.11v, and 802.11r

Port & Connector

Hardware Interface Definition

Object	Description
Antenna Connectors	4 N-type (female) antenna connectors
PoE LAN Port	10/100/1000Mbps RJ45 port, auto MDI/MDI-X 802.3at PoE+ supported, 48VDC In
Reset Button	Press and hold the Reset button for over 5 seconds to return to the factory default setting.
Grounding Terminal	The grounding wire must be attached to this port to prevent damage to the AP from direct lightning strike.

Chapter 3. Preparation

Before getting into the device's web UI, user has to check the network setting and configure PC's IP address.

3.1 System Requirements

- Broadband Internet Access Service (Cable/xDSL/Ethernet connection)
- One IEEE 802.3at PoE switch (supply power to the WDAP-C1800AX)
- PCs with a working Ethernet adapter and an Ethernet cable with RJ45 connectors
- PCs running Windows 98/ME, NT4.0, 2000/XP, Windows Vista / Win 7, MAC OS 9 or later, Linux, UNIX or other platforms compatible with **TCP/IP** protocols

1. The AP in the following instructions refers to PLANET WDAP-C1800AX. (Please refer to WDAP-1800AX & WDAP-W1800AXU QIG to install the AP)

2. It is recommended to use Internet Explorer 11, Firefox or Chrome to access the AP.

3.2 Hardware Installation -- Installing the AP

Before installing the AP, make sure your PoE switch is connected to the Internet through the broadband service successfully at this moment. If there is any problem, please contact your local ISP.

Please install the AP according to the following steps. Don't forget to pull out the power plug and keep your hands dry.

Step 1. Take the mounting bracket, put it on the target place by aligning the holes and fix it with the supplied screws.

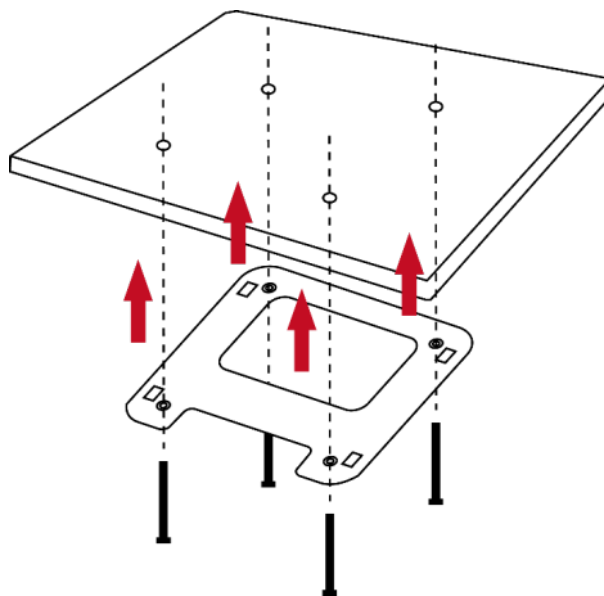

Figure 3-1 Mounting the Bracket

Step 2. Load the device into the mounting bracket, and be sure the device is mated with fixed screws. Then, lock the device in position and plug the Ethernet cable into the WDAP-C1800AX.

Figure 3-2 Connecting the Ethernet Cable

Step 3. Plug the other end of the Ethernet cable into the PoE switch.

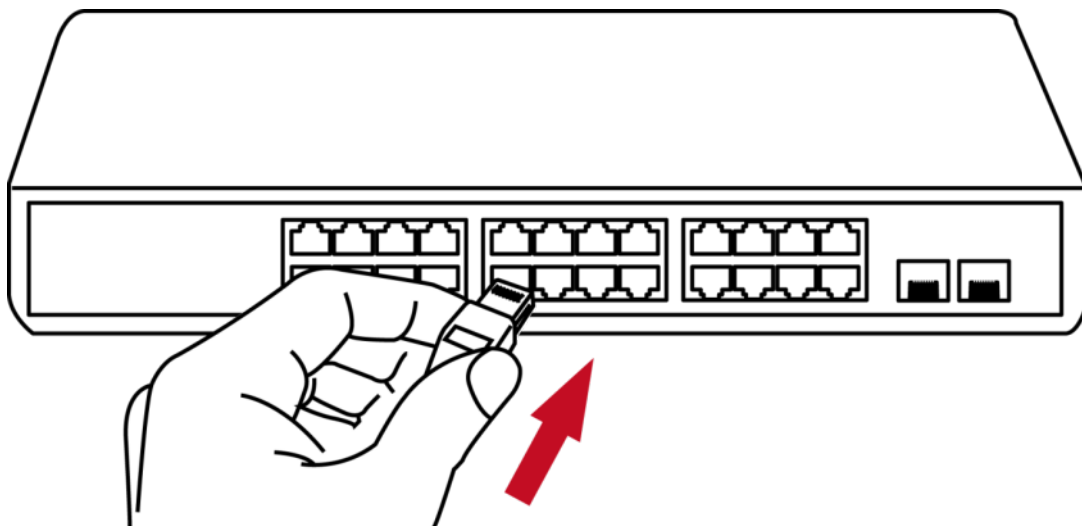

Figure 3-3 Connecting the PoE Injector

3.3 Manual Network Setup -- TCP/IP Configuration

The default IP address of the WDAP-C1800AX is **192.168.1.253**. And the default subnet mask is 255.255.255.0. These values can be changed as you want. In this guide, we use all the default values for description.

Connect the WDAP-C1800AX with your PC by plugging one end of an Ethernet cable in the LAN port of the AP and the other end in the LAN port of PC. The WDAP-C1800AX is powered by a PoE switch.

In the following sections, we'll introduce how to install and configure the TCP/IP correctly in **Windows 10**. And the procedures in other operating systems are similar. First, make sure your Ethernet Adapter is working, and refer to the Ethernet adapter manual if needed.

3.3.1 Configuring the IP Address Manually

Summary:

- Set up the TCP/IP Protocol for your PC.
 - Configure the network parameters. The IP address is 192.168.1.xxx (If the default IP address of the WDAP-C1800AX is 192.168.1.253, and the DSL router is 192.168.1.254, the "xxx" can be configured to any number from 1 to 252.) and subnet mask is 255.255.255.0.
- 1 Select **Use the following IP address**, and then configure the IP address of the PC.
 - 2 For example, the default IP address of the WDAP-C1800AX is 192.168.1.253 and the DSL router is 192.168.1.254, or you may choose from 192.168.1.1 to 192.168.1.252.

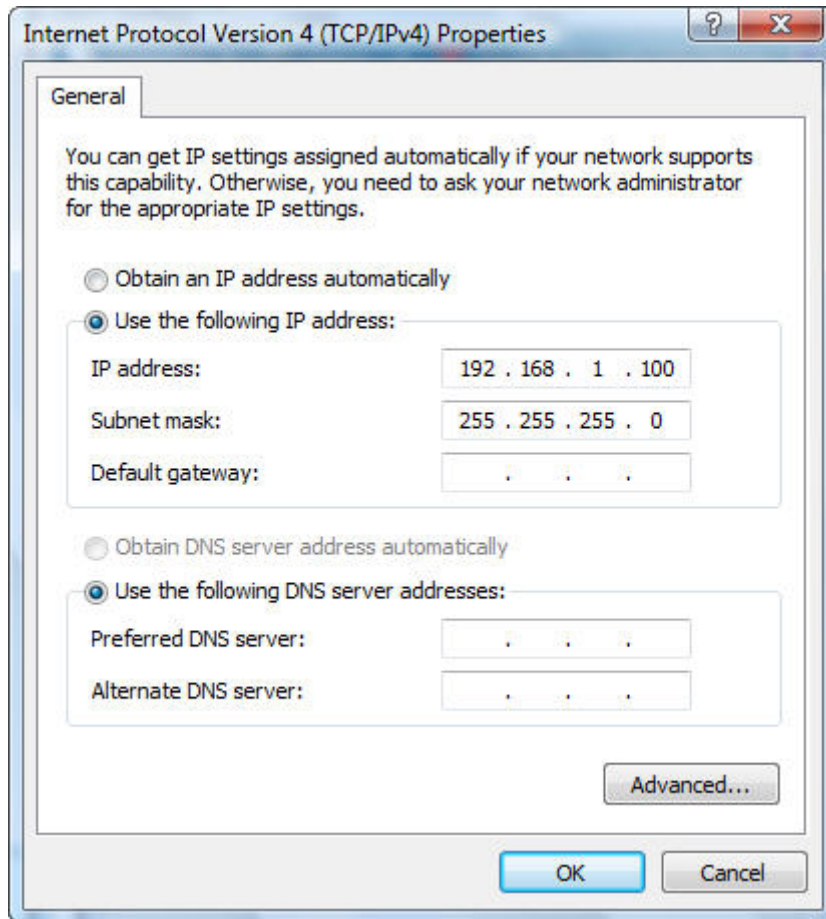

Figure 3-4 TCP/IP Setting

Now click **OK** to save your settings.

Now, you can run the ping command in the **command prompt** to verify the network connection between your PC and the AP. The following example is in **Windows 10 OS**. Please follow the steps below:

1. Click on **Start > Run**.
2. Type "**cmd**" in the Search box.

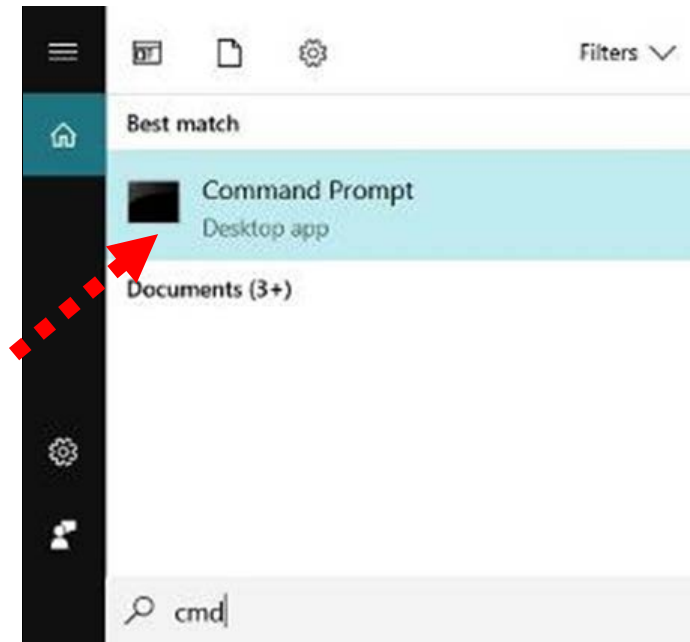

Figure 3-5 Windows Start Menu

3. Open a command prompt, type ping **192.168.1.253** and then press **Enter**.
 - ◆ If the result displayed is similar to **Figure 4-3**, it means the connection between your PC and the AP has been established well.

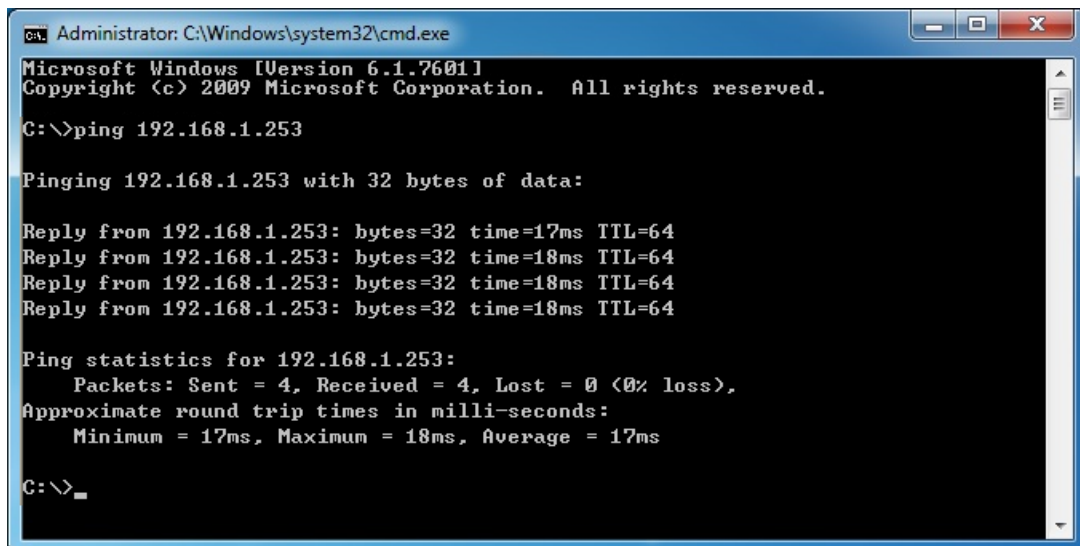

Figure 3-6 Successful Result of Ping Command

- ◆ If the result displayed is similar to **Figure 4-4**, it means the connection between your PC and the AP has failed.

```
Administrator: C:\Windows\system32\cmd.exe
Microsoft Windows [Version 6.1.7601]
Copyright (c) 2009 Microsoft Corporation. All rights reserved.

C:\Documents and Settings\user>ping 192.168.1.253

Pinging 192.168.1.253 with 32 bytes of data:

Destination host unreachable.
Destination host unreachable.
Destination host unreachable.
Destination host unreachable.

Ping statistics for 192.168.1.253:
    Packets: Sent = 4, Received = 0, Lost = 4 (100% loss),

C:\Documents and Settings\user>
```

Figure 3-7 Failed Result of Ping Command

If the address is 0.0.0.0, check your adapter installation, security settings, and the settings on your AP. Some firewall software programs may block a DHCP request on newly installed adapters.

3.4 Starting Setup in the Web UI

It is easy to configure and manage the AP with the web browser.

Step 1. To access the configuration utility, open a web-browser and enter the default IP address <https://192.168.1.253> in the web address field of the browser.

Figure 3-8 Login by Default IP Address

Step 1. When the login window pops up, please enter username and password. The default username and password are “admin”. Then click the **LOGIN** button to continue.

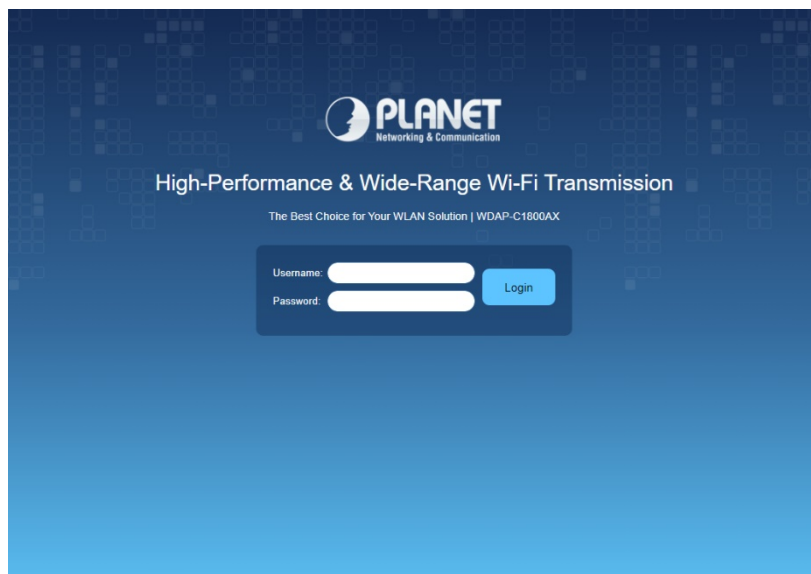

Figure 3-9 Login Window

Default IP Address: **192.168.1.253**

Default Password: **admin**

If the above screen does not pop up, it may mean that your web browser has been set to a proxy. Go to Tools menu> Internet Options> Connections> LAN Settings on the screen that appears, uncheck **Using Proxy** and click **OK** to finish it.

3.5 Planet Smart Discovery Utility

To easily list the WDAP-C1800AX in your Ethernet environment, the Planet Smart Discovery Utility is an ideal solution.

The following installation instructions guide you to running the Planet Smart Discovery Utility.

Step 1: Download the **Planet Smart Discovery Utility** to administrator PC.

Step 2: Run this utility and the following screen appears.

Step 3: Press **“Refresh”** for the current connected devices in the discovery list as shown in the following screen:

	MAC Address	Device Name	Version	DeviceIP	NewPassword	IP Address	NetMask	Gateway	Description
1	A8-F7-E0-00-00-01	WDAP-C1800AX	AP-ETSI-V3.0	192.168.1.201		192.168.1.201	255.255.255.0	192.168.1.254	WDAP-C1800AX
2	00-30-4F-BB-06-B6	VIP-101OPT	50.141.2.28	10.1.20.195		10.1.20.195	255.255.255.0	10.1.20.254	HD PoE IP Phone(1-Li
3	00-E0-4C-81-96-C1	POE-2400G	v4.253b200504	192.168.0.69		192.168.0.69	255.255.255.0	192.168.0.254	802.3at PoE Managec
4	00-30-4F-03-31-D1	IPX-330	v3.2.5	192.168.1.241		192.168.1.241	255.255.255.0	192.168.1.254	IPX-330

6	08-00-27-3E-E1-87	UNI-NMS-LITE	v1.0b210305	192.168.1.210		192.168.1.210	255.255.255.0	192.168.1.254	UNI-NMS-LITE

Step 3: Press **“Connect to Device”** and then the Web login screen appears.

The fields in the white background can be modified directly and then you can apply the new setting by clicking **“Update Device”**.

Chapter 4. Web-based Management

This chapter delivers a detailed presentation of AP's functionalities and allows you to manage the AP with ease. (The web GUI and topology below uses the WDAP-C1800AX as an example.)

Figure 4-1 Main Web Page

■ Main Menu

The main menu displays the product name, function menu, and main information in the center. Via the Web management, the administrator can set up the device by selecting the functions those listed in the function menu and button as shown in [Figures 4-2 and 4-3](#).

Figure 4-2: Function Menu

Object	Description
System	Provides system information of the router.
Network	Provides WAN, LAN and network configuration of the router.
Security	Provides firewall and security configuration of the router.
Wireless	Provides wireless configuration of the router.
Maintenance	Provides firmware upgrade and setting file restore/backup configuration of the router.

Figure 4-3: Function Button

Object	Description
	Click the " Refresh button " to refresh the current web page.
	Click the " Logout button " to log out the web UI of the router.

4.1 System

Use the system menu items to display and configure basic administrative details of the router. The System menu shown in [Figure 4-4](#) provides the following features to configure and monitor system.

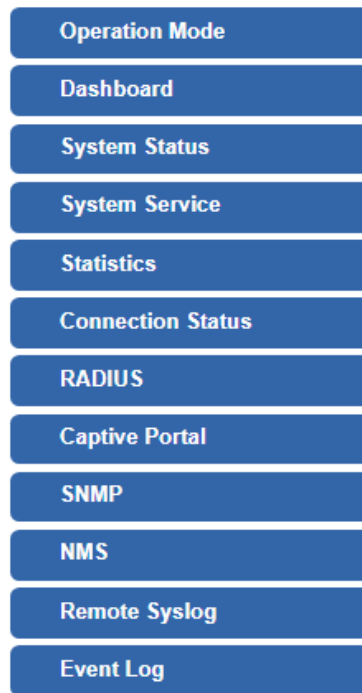

Figure 4-4: System Menu

Object	Description
Operation Mode	The Wizard will guide the user to configuring the router easily and quickly.
Dashboard	The overview of system information includes connection, port, and system status.
System Status	Display the status of the system, Device Information, LAN and WAN.
System Service	Display the status of the system, Secured Service and Server Service
Statistics	Display statistics information of network traffic of LAN and WAN.
Connection Status	Display the DHCP client table and the ARP table
RADIUS	Enable/Disable RADIUS on routers
Captive Portal	Enable/Disable Captive Portal on routers
SNMP	Display SNMP system information
NMS	Enable/Disable NMS on routers

Remote Syslog	Enable Captive Portal on routers
Event Log	Display Event Log information

4.1.1 Operation Mode

The Wizard guides you to configuring the WDAP-C1800AX in a different mode, including AP, gateway and repeater modes.

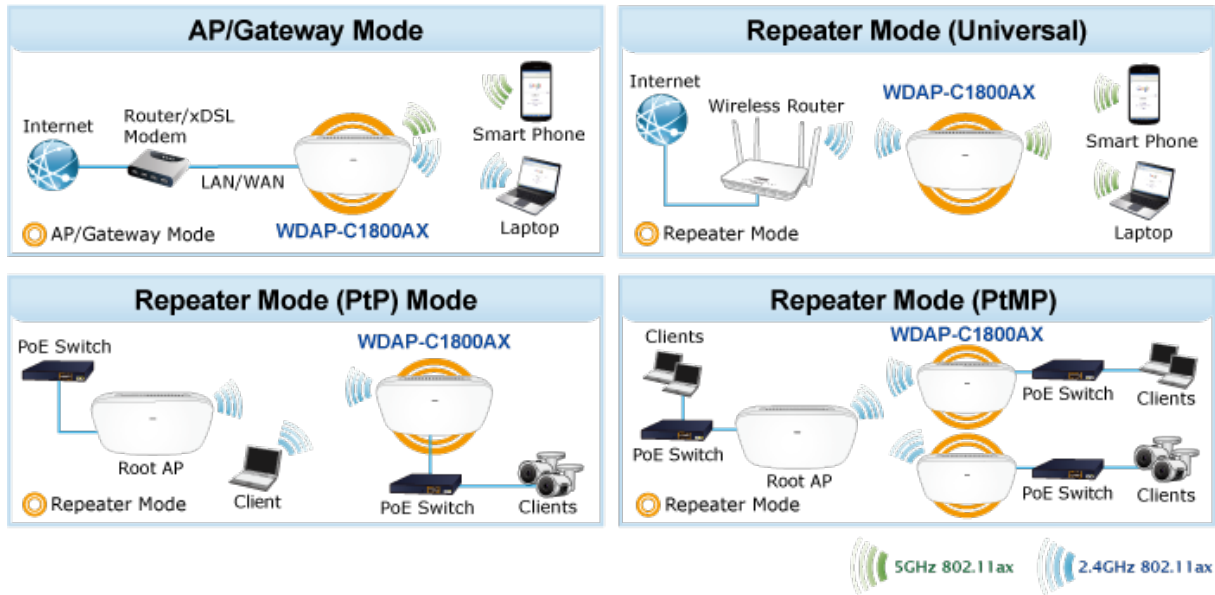

Figure 4-5 Operation Mode

The default operation mode is AP Mode.

4.1.2 Gateway Mode (Router)

Click “Wizard” → “Gateway Mode” and the following page will be displayed. This section allows you to configure the Gateway mode.

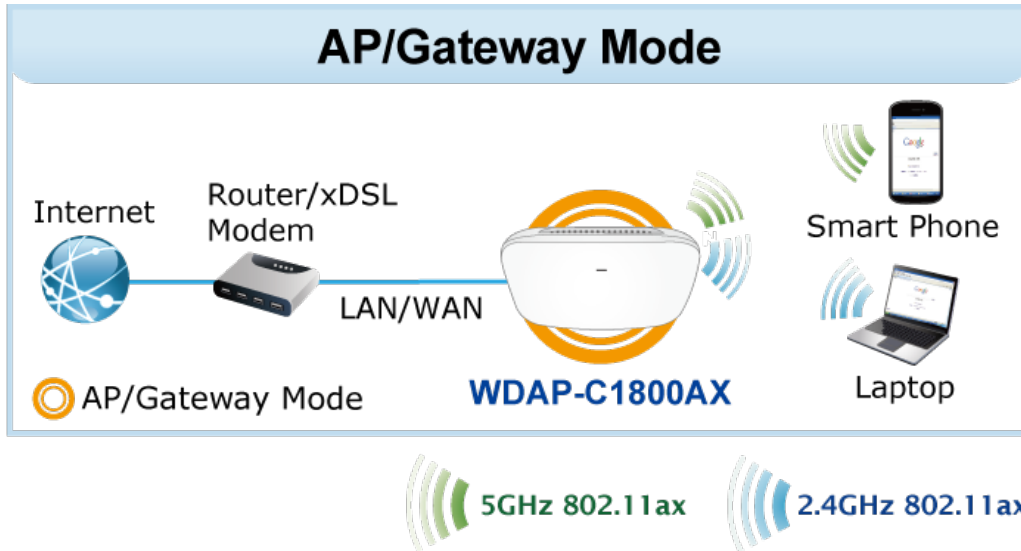

Figure 4-6: Setup Wizard

Step 1: Operation Mode

Select operation Mode.

STEP 1 - Operation Mode

1 Mode 2 LAN 3 WAN 4 Wireless 5 Security 6 Completed

▼ Current Mode

 Gateway Mode
  AP Mode
  Repeater Mode

In this mode, the device is supposed to connect to internet via ADSL/Cable Modem. The NAT is enabled and PCs in LAN ports share the same IP to ISP through WAN port. The connection type can be setup in WAN page by using PPPoE, DHCP client or static IP.

Cancel Next

Step 2: LAN Interface

Set up the IP Address and Subnet Mask for the LAN interface as shown in [Figure 4-7](#).

Start IP Address

Maximum DHCP Users

Figure 4-7: Setup Wizard – LAN Configuration

Object	Description
IP Address	Enter the IP address of your router. The default is 192.168.1.1.
Subnet Mask	An address code that determines the size of the network. Normally use 255.255.255.0 as the subnet mask.
DHCP Server	By default, the DHCP Server is enabled. If user needs to disable the function, please uncheck the box.
Start IP Address	By default, the start IP address is 192.168.1.100. Please do not set it to the same IP address of the router.
Maximum DHCP Users	By default, the maximum DHCP users are 101, which means the router will provide DHCP client with IP address from 192.168.1.100 to 192.168.1.200 when the start IP address is 192.168.1.100.
Next	Press this button to the next step.
Cancel	Press this button to undo any changes made locally and revert to previously saved values.

Step 3: WAN Interface

The router supports two access modes on the WAN side shown in [Figure 4-8](#)

STEP 3 - Network Interface WAN

192.168.1.1	00:e0:53:00:12:01	dynamic

Figure 4-18: Connection Status

4.1.8 RADIUS

Remote Authentication Dial-In User Service (RADIUS) is a security authentication client/server protocol that supports authentication, authorization and accounting. The RADIUS Server page is shown in [Figure 4-19](#).

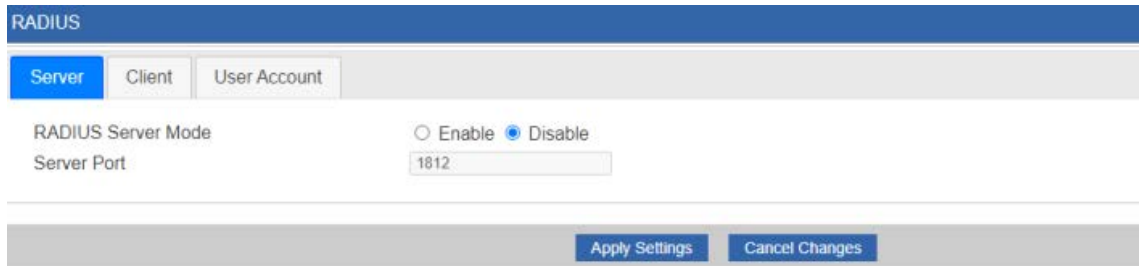

Figure 4-19: RADIUS

Object	Description
RADIUS	Disable or enable the RADIUS function. The default configuration is disabled.
Server Port	Default: 1812

4.1.9 Captive Portal

Captive portal service gives the ability to organize a public (or guest) Wi-Fi zone with user authorization. A captive portal is the authorization page that forcibly redirects users who connect to the public network before accessing the Internet. The Captive portal page is shown in [Figure 4-20](#).

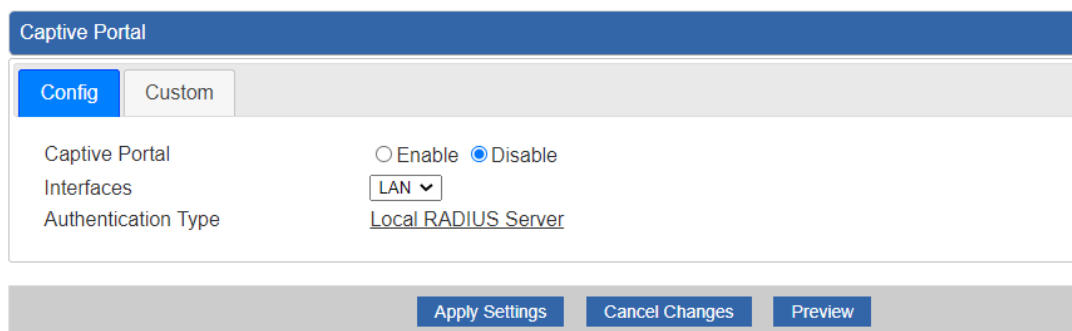

Figure 4-20: Captive Portal

Object	Description
Captive Portal	Disable or enable the Captive Portal function. The default configuration is disabled.

Captive Portal function can be only configured at **Gateway Mode**

■ Customizing the Custom Captive Portal Web Page

1. Click **Custom**

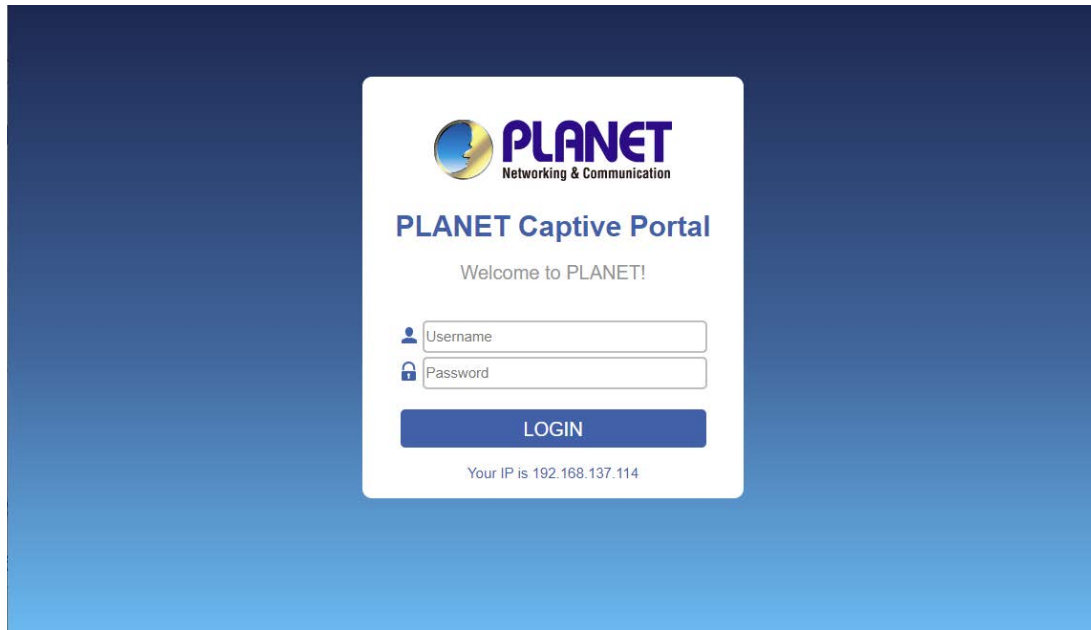

The screenshot shows the 'Captive Portal' configuration interface. At the top, there are two tabs: 'Config' and 'Custom', with 'Custom' selected. The interface is divided into several sections:

- Background:** A text input field containing 'ffff' and a color selection icon.
- Title Word Color:** A text input field containing '3365a9' and a color selection icon.
- Description Word Color:** A text input field containing '949494' and a color selection icon.
- Title:** A text area containing 'PLANET Captive Portal'. Below it, a note reads '(Max 256 characters. Allow special symbols and HTML.)'
- Description:** A text area containing 'Welcome to PLANET!'. Below it, a note reads '(Max 1280 characters. Allow special symbols and HTML.)'
- Current Image:** A preview of the PLANET logo with the text 'PLANET Networking & Communication'.
- Upload Image:** A button labeled '選擇檔案' (Choose File) and the text '未選擇任何檔案' (No file selected). Below this, it specifies 'Size: up to 1M' and 'Format Limit: .jpg .gif .bmp .png'.

At the bottom of the page, there are three buttons: 'Apply Settings', 'Cancel Changes', and 'Preview'.

2. After configure and upload image, click **Apply Settings** button
3. Click **Preview** to check the Captive Portal login page

4.1.10 SNMP

Cancel Changes	Press this button to undo any changes made locally and revert to previously saved values.

4.1.11 NMS

The CloudViewer Server – Internet screens – is shown in Figure 4-22.

The screenshot shows the 'NMS Configuration' interface. It features a blue header bar with the title 'NMS Configuration'. Below the header, there are four rows of configuration options:

- NMS:** A dropdown menu currently showing 'PLANET CloudViewer Server - Internet'.
- Email:** An empty text input field.
- Password:** An empty text input field.
- Connection Status:** A label indicating 'Not enabled'.

At the bottom of the configuration area, there are two buttons: 'Apply Settings' and 'Cancel Changes'.

Netmask
Default Gateway
Interface
Comment

Apply Settings
Cancel Changes

Figure 4-30: Routing setup

Routing tables contain a list of IP addresses. Each IP address identifies a remote router (or other network gateway) that the local router is configured to recognize. For each IP address, the routing table additionally stores a network mask and other data that specifies the destination IP address ranges that remote device will accept.

Object	Description
Type	There are two types: Host and Net. When the Net type is selected, user does not need to input the Gateway.
Destination	The network or host IP address desired to access.
Net Mask	The subnet mask of destination IP.
Gateway	The gateway is the router or host's IP address to which packet was sent. It must be the same network segment with the WAN or LAN port.
Interface	Select the interface that the IP packet must use to transmit out of the router when this route is used.
Comment	Enter any words for recognition.

Connection Type	Select IPv6 WAN type either by using DHCP or Static.
IPv6 Address	Enter the WAN IPv6 address.
Subnet Prefix Length	Enter the subnet prefix length.
Default Gateway	Enter the default gateway of the WAN port.
IPv6 DNS Server 1	Input a specific DNS server
IPv6 DNS Server 2	Input a specific DNS server

4.2.9 DHCP

The DHCP service allows you to control the IP address configuration of all your network devices. When a client (host or other device such as networked printer, etc.) joins your network it will automatically get a valid IP address from a range of addresses and other settings from the DHCP service. The client must be configured to use DHCP; this is something called "automatic network configuration" and is often the default setting. The setup is shown in [Figure 4-35](#).

DHCP Configuration

DHCP Server Enable Disable

Start IP Address 192.168.1.

Maximum DHCP Users

DNS Server Automatically Manually

Primary DNS Server

Secondary DNS Server

WINS

Lease Time minutes

Domain Name

Static DHCP List

Index	Device Name	IP Address	MAC Address	Delete
	<input style="width: 150px;" type="text"/>	<input style="width: 100px;" type="text" value="192.168.1.150"/>	<input style="width: 100px;" type="text" value="00:30:4F:00:00:01"/>	<input type="button" value="Add"/>

Figure 4-35: DHCP

Object	Description
DHCP Service	By default, the DHCP Server is enabled, meaning the router will assign IP addresses to the DHCP clients automatically. If user needs to disable the function, please set it as disable.
Start IP Address	By default, the start IP address is 192.168.1.100. Please do not set it to the same IP address of the router.
Maximum DHCP Users	By default, the maximum DHCP users are 101, meaning the router will provide DHCP client with IP address from 192.168.1.100 to 192.168.1.200 when the start IP address is 192.168.1.100.
DNS Server	By default, it is set as Automatically, and the DNS server is the router's LAN IP address. If user needs to use specific DNS server, please set it as Manually, and then input a specific DNS server.

Object	Description
Primary/Secondary DNS Server	Input a specific DNS server.
WINS	Input a WINS server if needed.
Lease Time	Set the time for using one assigned IP. After the lease time, the DHCP client will need to get new IP addresses from the router. Default is 1440 minutes.
Domain Name	Input a domain name for the router.

4.2.10 DDNS

The router offers the DDNS (Dynamic Domain Name System) feature, which allows the hosting of a website, FTP server, or e-mail server with a fixed domain name (named by yourself) and a dynamic IP address, and then your friends can connect to your server by entering your domain name no matter what your IP address is. Before using this feature, you need to sign up for DDNS service providers such as **PLANET DDNS** (<http://www.planetddns.com>) and set up the domain name of your choice.

PLANET DDNS website provides a free DDNS (Dynamic Domain Name Server) service for PLANET devices. Whether the IP address used on your PLANET device supporting DDNS service is fixed or dynamic, you can easily connect the devices anywhere on the Internet with a meaningful or easy-to-remember name you gave. PLANET DDNS provides two types of DDNS services. One is **PLANET DDNS** and the other is **PLANET Easy DDNS** as shown in [Figure 4-36](#).

PLANET DDNS

For example, you've just installed a PLANET IP camera with dynamic IP like 210.66.155.93 in the network. You can name this device as "Mycam1" and register a domain as Mycam1.planetddns.com at PLANET DDNS (<http://www.planetddns.com>). Thus, you don't need to memorize the exact IP address but just the URL link: Mycam1.planetddns.com.

PLANET Easy DDNS

PLANET Easy DDNS is an easy way to help user to get your Domain Name with just one click. You can just log in to the Web Management Interface of your devices, say, your router, and check the DDNS menu and just enable it. You don't need to go to <http://www.planetddns.com> to apply for a new account. Once you enabled the Easy DDNS, your PLANET Network Device will use the format PLxxxxxx where xxxxxx is the last 6 characters of your MAC address that can be found on the Web page or bottom label of the device. (For example, if the router's MAC address is A8-F7-E0-81-96-C9, it will be converted into pt8196c9.planetddns.com)

DDNS Configuration

Dynamic DNS	<input checked="" type="radio"/> Enable <input type="radio"/> Disable	
Interface	<input type="text" value="WAN1"/>	
DDNS Type	<input type="text" value="PLANET DDNS"/>	
PLANET Easy DDNS	<input type="text" value="Disable"/>	
User Name	<input type="text"/>	
Password	<input type="text"/>	
Host Name	<input type="text"/>	
Interval	<input type="text" value="120"/>	seconds
Connection Status	Not enabled	

Figure 4-36: PLANET DDNS

Object	Description
DDNS Service	By default, the DDNS service is disabled. If user needs to enable the function, please set it as enable.
Interface	User is able to select the interface for DDNS service. By default, the interface is WAN 1.
DDNS Type	There are three options: 1. PLANET DDNS: Activate PLANET DDNS service. 2. DynDNS: Activate DynDNS service. 3. NOIP: Activate NOIP service. Note that please first register with the DDNS service and set up the domain name of your choice to begin using it.
Easy DDNS	When the PLANET DDNS service is activated, user is able to select to enable or disable Easy DDNS. When this function is enabled, DDNS hostname will appear automatically. User doesn't go to http://www.planetddns.com to apply for a new account.
User Name	The user name is used to log into DDNS service.
Password	The password is used to log into DDNS service.
Host Name	The host name as registered with your DDNS provider.
Interval	Set the update interval of the DDNS function.
Connection Status	Show the connection status of the DDNS function.

4.3 Security

The Security menu provides Firewall, Access Filtering and other functions as shown in [Figure 4-37](#). Please refer to the following sections for the details.

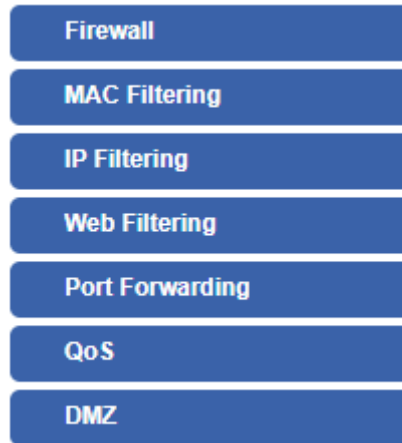

Figure 4-37: Security menu

Object	Description
Firewall	Allows setting DoS (Denial of Service) protection as enable.
MAC Filtering	Allows setting MAC Filtering.
IP Filtering	Allows setting IP Filtering.
Web Filtering	Allows setting Web Filtering.
Port Forwarding	Allows setting Port Forwarding.
QoS	Allows setting QoS.
DMZ	Allows setting DMZ.

4.3.1 Firewall

A "Denial-of-Service" (DoS) attack is characterized by an explicit attempt by hackers to prevent legitimate users of a service from using that service. The router can prevent specific DoS attacks as shown in [Figure 4-38](#).

Firewall Protection

SPI Firewall Enable Disable

DDoS

Block SYN Flood	<input checked="" type="radio"/> Enable <input type="radio"/> Disable	<input type="text" value="30"/>	Packets/Second
Block FIN Flood	<input type="radio"/> Enable <input checked="" type="radio"/> Disable	<input type="text" value="30"/>	Packets/Second
Block UDP Flood	<input type="radio"/> Enable <input checked="" type="radio"/> Disable	<input type="text" value="30"/>	Packets/Second
Block ICMP Flood	<input type="radio"/> Enable <input checked="" type="radio"/> Disable	<input type="text" value="5"/>	Packets/Second
Block IP Teardrop Attack	<input type="radio"/> Enable <input checked="" type="radio"/> Disable		
Block Ping of Death	<input type="radio"/> Enable <input checked="" type="radio"/> Disable		
Block TCP packets with SYN and FIN Bits set	<input type="radio"/> Enable <input checked="" type="radio"/> Disable		
Block TCP packets with FIN Bit set but no ACK Bit set	<input type="radio"/> Enable <input checked="" type="radio"/> Disable		
Block TCP packets without Bits set	<input type="radio"/> Enable <input checked="" type="radio"/> Disable		

System Security

Block WAN Ping	<input type="radio"/> Enable <input checked="" type="radio"/> Disable	
HTTP Port	<input type="text" value="80"/>	
HTTPs Port	<input type="text" value="443"/>	
Remote Management	<input type="radio"/> Enable <input checked="" type="radio"/> Disable	
Temporarily block when login failed more than	<input type="text" value="0"/>	(0 means no limit)
IP blocking period	<input type="text" value="0"/>	minute(s) (0 means permanent blocking)
Blocked IP	<input type="text" value="0.0.0.0"/>	

NAT ALGs

FTP ALG	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
TFTP ALG	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
RTSP ALG	<input type="radio"/> Enable <input checked="" type="radio"/> Disable

SIP ALG	<input type="radio"/> Enable <input checked="" type="radio"/> Disable

Apply Settings
Cancel Changes

Figure 4-38: Firewall

Object	Description
SPI Firewall	<p>The SPI Firewall prevents attack and improper access to network resources.</p> <p>The default configuration is enabled.</p>
Block SYN Flood	<p>SYN Flood is a popular attack way. DoS and DDoS are TCP protocols. Hackers like using this method to make a fake connection that involves the CPU, memory, and so on.</p> <p>The default configuration is enabled.</p>
Block FIN Flood	<p>If the function is enabled, when the number of the current FIN packets is beyond the set value, the router will start the blocking function immediately.</p> <p>The default configuration is disabled.</p>
Block UDP Flood	<p>If the function is enabled, when the number of the current UPD-FLOOD packets is beyond the set value, the router will start the blocking function immediately.</p> <p>The default configuration is disabled.</p>
Block ICMP Flood	<p>ICMP is kind of a pack of TCP/IP; its important function is to transfer simple signal on the Internet. There are two normal attack ways which hackers like to use, Ping of Death and Smurf attack.</p> <p>The default configuration is disabled.</p>
IP TearDrop	<p>If the function is enabled, the router will block Teardrop attack that is targeting on TCP/IP fragmentation reassembly codes.</p>
Ping Of Death	<p>If the function is enabled, the router will block Ping of Death attack that aims to disrupt a targeted machine by sending a packet larger than the maximum allowable size causing the target machine to freeze or crash.</p>
TCP packets with SYN and FIN Bits set	<p>Set the function as enable or disable</p>
TCP packets with FIN Bit set but no ACK Bit set	<p>Set the function as enable or disable</p>
TCP packets without Bits set	<p>Set the function as enable or disable</p>
Block WAN Ping	<p>Enable the function to allow the Ping access from the Internet network.</p> <p>The default configuration is disabled.</p>
HTTP Port	<p>The default is 80.</p>
HTTPs Port	<p>The default is 443.</p>

Remote Management	Enable the function to allow the web server access of the router from the Internet network. The default configuration is disabled.
Temporarily block when login failed	The default is 0. (0 means no limit)
IP blocking period	The default is 0. (0 means permanent blocking)
Blocked IP	0.0.0.0
FTP ALG	Set the function as enable or disable
TFTP ALG	Set the function as enable or disable
RTSP ALG	Set the function as enable or disable
H.323 ALG	Set the function as enable or disable
SIP ALG	Set the function as enable or disable

4.3.2 MAC Filtering

Entries in this table are used to restrict certain types of data packets from your local network or Internet through the router. Use of such filters can be helpful in securing or restricting your local network as shown in [Figure 4-39](#).

MAC Filtering

MAC Filtering Enable Disable
Interface LAN WAN

MAC Filtering Rules

Index	Active	Device Name	MAC Address	Action
		abc	00:30:4F:00:00:01	Add

[Apply Settings](#)
[Cancel Changes](#)

Figure 4-39: MAC Filtering

Object	Description
Enable MAC Filtering	Set the function as enable or disable. When the function is enabled, the router will block traffic of the MAC address on the list.
Interface	Select the function works on LAN, WAN or both. If you want to block a LAN device's MAC address, please select LAN, vice versa.
MAC Address	Input a MAC address you want to control, such as A8:F7:E0:00:06:62.
Add	When you input a MAC address, please click the "Add" button to add it into the list.

4.3.4 IP Filtering

IP Filtering is used to deny LAN users from accessing the public IP address on internet as shown in Figure 4-40. To begin blocking access to an IP address, enable IP Filtering and enter the IP address of the web site you wish to block.

Figure 4-40: IP Filtering

Object	Description
IP Filtering	Set the function as enable or disable.
Add IP Filtering Rule	Go to the Add Filtering Rule page to add a new rule.

Figure 4-41: IP Filter Rule Setting

Object	Description
Enable	Set the rule as enable or disable.
Type	Set the type as IPv4 or IPv6
Source IP Address	Input the IP address of LAN user (such as PC or laptop) which you want to control.
Anywhere (of source IP Address)	Check the box if you want to control all LAN users.
Destination IP Address	Input the IP address of web site which you want to block.
Anywhere (of destination IP Address)	Check the box if you want to control all web sites, meaning the LAN user can't visit any web site.
Destination Port	Input the port of destination IP Address which you want to block. Leave it as blank if you want to block all ports of the web site.
Protocol	Select the protocol type (TCP, UDP or all). If you are unsure, please leave it to the default all protocol.

4.3.6 Web Filtering

Web filtering is used to deny LAN users from accessing the internet as shown in [Figure 4-43](#). Block those URLs which contain keywords listed below.

Web Filtering			
Web Filtering		<input type="radio"/> Enable <input checked="" type="radio"/> Disable	
Web Filtering Rules			
No.	Active	Filter Keyword	Action
<input type="button" value="Add Web Filtering Rule"/>			

Figure 4-41: Web Filtering

Web Filtering	Set the function as enable or disable.
Add Web Filtering Rule	Go to the Add Web Filtering Rule page to add a new rule.

Web Filter Settings	
Status	<input type="text" value="Enable"/>
Filter Keyword	<input type="text" value="ex. www.yahoo.com"/>
<input type="button" value="Apply Settings"/> <input type="button" value="Cancel Changes"/>	

Figure 4-42: Web Filtering Rule Setting

Object	Description
Status	Set the rule as enable or disable.
Filter Keyword	Input the URL address that you want to filter, such as www.yahoo.com.

4.3.7 Port Forwarding

Entries in this table allow you to automatically redirect common network services to a specific machine behind the NAT firewall as shown in [Figure 4-43](#). These settings are only necessary if you wish to host some sort of server like a web server or mail server on the private local network behind your Router's NAT firewall.

Figure 4-43: Port Forwarding

Object	Description
Port Forwarding	Set the function as enable or disable.
Add Port Forwarding Rule	Go to the Add Port Forwarding Rule page to add a new rule.

Figure 4-44: Port Forwarding Rule Setting

Object	Description
Active	Set the function as enable or disable
Rule Name	Enter any words for recognition.
Protocol	Select the protocol type (TCP, UDP or both). If you are unsure, please leave it to the default both protocols.
External Service Port	Enter the external ports you want to control. For TCP and UDP services, enter the beginning of the range of port numbers used by the service. If the service uses a single port number, enter it in both the start and finish fields.
Virtual Server IP Address	Enter the local IP address.
Internal Service Port	Enter local ports you want to control. For TCP and UDP Services, enter the beginning of the range of port numbers used by the service. If the service uses a single port number, enter it in both the start and finish fields.

4.3.8 QoS

QoS - WAN1

Quality of Service	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Upstream	<input type="text" value="0"/> Kbps
Downstream	<input type="text" value="0"/> Kbps

Upstream Bandwidth	Setting Upstream Bandwidth
Downstream Bandwidth	Setting Downstream Bandwidth
Service Priority	Setting Service Priority
Network Priority	Setting Network Priority

4.3.9 DMZ

A Demilitarized Zone is used to provide Internet services without sacrificing unauthorized access to its local private network as shown in [Figure 4-46](#). Typically, the DMZ host contains devices accessible to Internet traffic, such as Web (HTTP) servers, FTP servers, SMTP (e-mail) servers and DNS servers.

Figure 4-46: DMZ

Object	Description
DMZ	Set the function as enable or disable. If the DMZ function is enabled, it means that you set up DMZ at a particular computer to be exposed to the Internet so that some applications/software, especially Internet/online game can have two way connections.
DMZ IP Address	Enter the IP address of a particular host in your LAN which will receive all the packets originally going to the WAN port/Public IP address above.

4.4 Wireless

The Wireless menu provides the following features for managing the system

Figure 4-47: Wireless Menu

Object	Description
Repeater	Allow to configure Repeater.
2.4G Wi-Fi	Allow to configure 2.4G Wi-Fi.
5G Wi-Fi	Allow to configure 5G Wi-Fi.
MAC ACL	Allow configure MAC ACL.
Wi-Fi Advanced	Allow to configure advanced setting of Wi-Fi.
Wi-Fi Statistics	Display the statistics of Wi-Fi traffic.
Connection Status	Display the connection status.

4.4.1 Repeater

This page allows the user to define Repeater

Repeater Configuration

Select Radio	<input type="text" value="Use 5GHz Radio"/>	
SSID	<input type="text" value="PLANET_5G"/>	<input type="button" value="Scan"/>
Lock BSSID	<input type="radio"/> Enable <input checked="" type="radio"/> Disable	
BSSID	<input type="text" value="A8:F7:E0:B2:31:FB"/>	
Encryption	<input type="text" value="Open"/>	

Figure 4-48: Repeater

Object	Description
Select Radio	Select "2.4GHz" or "5GHz" wireless LAN.
SSID (Wireless Name)	Enter the root AP's SSID or press "Scan" to select.
Lock BSSID	Enable/disable to lock the root AP's MAC address.
BSSID	The root AP's MAC address
Encryption	Select the wireless encryption of root AP. The default is "Open"

4.4.2 2.4G Wi-Fi

This page allows the user to define 2.4G Wi-Fi.

2.4GHz WiFi Configuration

Basic
Virtual AP1
Virtual AP2
Virtual AP3

Wireless Status	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Wireless Name (SSID)	<input type="text" value="PLANET_2.4G"/>
Hide SSID	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Wireless Mode	<input type="text" value="11 AX 20/40MHz"/>
Channel	<input type="text" value="6"/>
Encryption	<input type="text" value="Open"/>
WiFi Multimedia	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
VLAN ID	<input type="text" value="1"/>

Figure 4-49: 2.4G Wi-Fi

Object	Description
Wireless Status	Allows user to enable or disable 2.4G Wi-Fi
Wireless Name (SSID)	It is the wireless network name. The default 2.4G SSID is

	"PLANET_2.4G"
Hide SSID	Allows user to enable or disable SSID
Wireless Mode	Select the operating wireless mode
Channel	It shows the channel of the CPE. Default 2.4GHz is channel 6.
Encryption	Select the wireless encryption. The default is "Open"
Wi-Fi Multimedia	Enable/Disable WMM (Wi-Fi Multimedia) function
VLAN ID	Setting VLAD ID

4.4.3 5G Wi-Fi

This page allows the user to define 5G Wi-Fi.

Figure 4-50: 5G Wi-Fi

Object	Description
Wireless Status	Allows user to enable or disable 5G Wi-Fi
Wireless Name (SSID)	It is the wireless network name. The default 5G SSID is "PLANET_5G"
Hide SSID	Allows user to enable or disable SSID
Wireless Mode	Select the operating wireless mode
Channel	It shows the channel of the CPE. Default 5GHz is channel 36.
Encryption	Select the wireless encryption. The default is "Open"
Wi-Fi Multimedia	Enable/Disable WMM (Wi-Fi Multimedia) function
VLAN ID	Setting VLAD ID

4.4.4 MAC ACL

This page allows the user to define MAC ACL.

MAC ACL

MAC ACL Enable Disable

MAC ACL Rules

Index	Active	Device Name	MAC Address	Action
		<input type="text" value="abc"/>	<input type="text" value="00:30:4F:00:00:01"/>	<div style="background-color: #0056b3; color: white; padding: 2px 5px; margin-bottom: 2px;">Add</div> <div style="background-color: #0056b3; color: white; padding: 2px 5px;">Scan</div>

Figure 4-51: MAC ACL

Object	Description
Active	Allows the devices to pass in the rule
Device Name	Set an allowed device name
MAC Address	Set an allowed device MAC address
Add	Press the “ Add ” button to add end-device that is scanned from wireless network and mark them
Scan	Connect to client list

4.4.5 Wi-Fi Advanced

This page allows the user to define advanced setting of Wi-Fi.

WiFi Advanced

2.4GHz Maximum Associated Clients	<input type="text" value="75"/>	(Range 1~75)
5GHz Maximum Associated Clients	<input type="text" value="75"/>	(Range 1~75)
2.4GHz Coverage Threshold	<input type="text" value="-95"/>	(-95dBm ~ -60dBm)
5GHz Coverage Threshold	<input type="text" value="-95"/>	(-95dBm ~ -60dBm)
2.4GHz TX Power	<input type="text" value="Max(100%)"/> ▼	
5GHz TX Power	<input type="text" value="Max(100%)"/> ▼	
2.4GHz WLAN Partition	<input type="radio"/> Enable <input checked="" type="radio"/> Disable	
5GHz WLAN Partition	<input type="radio"/> Enable <input checked="" type="radio"/> Disable	
RTS Threshold	<input type="text" value="2347"/>	(0-2347)

Figure 4-52: Wi-Fi Advanced

Object	Description
2.4GHz Maximum Associated Clients	The maximum users are 75
5GHz Maximum Associated Clients	The maximum users are 75
2.4G Coverage Threshold	The coverage threshold is to limit the weak signal of clients occupying session. The default is -95dBm
5G Coverage Threshold	The coverage threshold is to limit the weak signal of clients occupying session. The default is -95dBm
2.4G TX Power	The range of transmit power is Max (100%), Efficient (75%), Enhanced (50%), Standard (25%) or Min (15%) . In case of shortening the distance and the coverage of the wireless network, input a smaller value to reduce the radio transmission power
5G TX Power	The range of transmit power is Max (100%), Efficient (75%), Enhanced (50%), Standard (25%) or Min (15%) . In case of shortening the distance and the coverage of the wireless network, input a smaller value to reduce the radio transmission power
2.4GHz WLAN Partition	Set the function as enable or disable
5GHz WLAN Partition	Set the function as enable or disable
RTS Threshold	Enable or Disable RTS/CTS protocol. It can be used in the

following scenarios and used by Stations or Wireless AP.

1) When medium is too noisy or lots of interferences are present.

If the AP/Station cannot get a chance to send a packet, the RTS/CTS mechanism can be initiated to get the packet sent.

2) In mixed mode, the hidden node problem can be avoided.

The default value is **2347**

4.4.6 Wi-Fi Statistics

This page shows the statistics of Wi-Fi traffic.

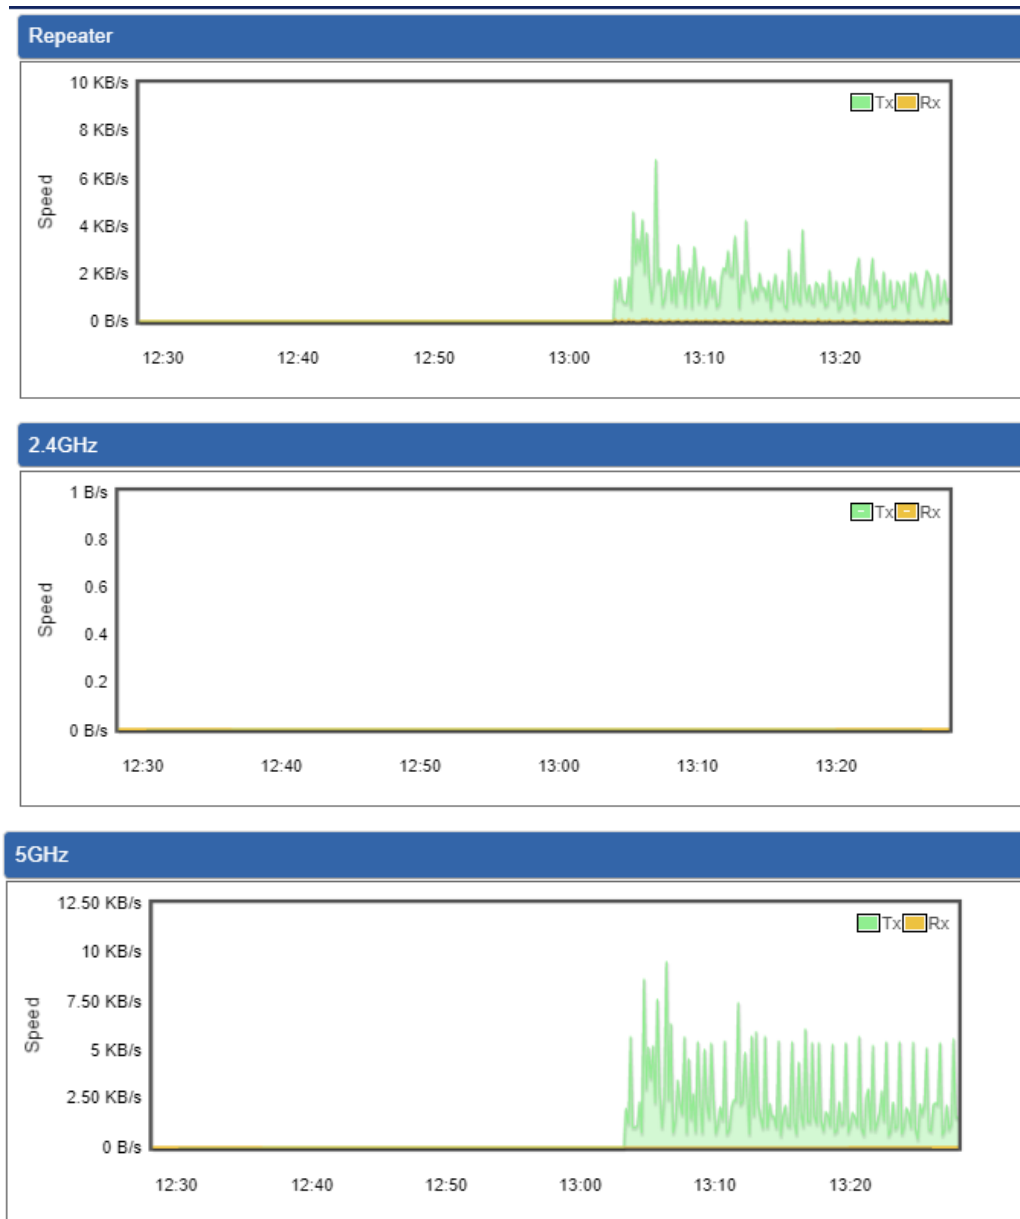

Figure 4-53: Wi-Fi Statistics

4.4.7 Connection Status

This page shows the host names and MAC address of all the clients in your network

Client List				
No.	Name	MAC Address	Signal	Connected Time

Figure 4-54: Connection Status

Object	Description
Name	Display the host name of connected clients.
MAC Address	Display the MAC address of connected clients.
Signal	Display the connected signal of connected clients.
Connected Time	Display the connected time of connected clients.

4.5 Maintenance

The Maintenance menu provides the following features for managing the system

Figure 4-55: Maintenance

Object	Description
Administrator	Allows changing the login username and password.
Date & Time	Allows setting Date & Time function.
Save/Restore Configuration	Export the router's configuration to local or USB sticker. Restore the router's configuration from local or USB sticker.
Firmware Upgrade	Upgrade the firmware from local or USB storage.
Reboot / Reset	Reboot or reset the system.
Auto Reboot	Allows setting auto-reboot schedule.
Diagnostics	Allows you to issue ICMP PING packets to troubleshoot IP.

4.5.1 Administrator

To ensure the router's security is secure, you will be asked for your password when you access the router's Web-based utility. The default user name and password are "admin". This page will allow you to modify the user name and passwords as shown in [Figure 4-56](#).

Account Password

Username	<input type="text" value="admin"/>
Password	<input type="password"/>
Confirm Password	<input type="password"/>

Apply Settings
Cancel Changes

Figure 4-56: Administrator

Object	Description
Username	Input a new username.
Password	Input a new password.
Confirm Password	Input password again.

4.5.2 Date and Time

This section assists you in setting the system time of the router. You are able to either select to set the time and date manually or automatically obtain the GMT time from Internet as shown in [Figure 4-57](#).

Date and Time

Current Time	Year <input type="text" value="2019"/> Month <input type="text" value="10"/> Day <input type="text" value="22"/> Hour <input type="text" value="10"/> Minute <input type="text" value="27"/> Second <input type="text" value="12"/>
	<input type="button" value="Copy Computer Time"/>
Time Zone Select	<input type="text" value="(GMT+08:00)Taipei"/>
NTP Client Update	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
NTP Server	<input type="text" value="time.nist.gov"/> <input type="text" value="time.windows.com"/> <input type="text" value="time.stdtime.gov.tw"/> <input type="text"/>

Apply Settings
Cancel Changes

Figure 4-57: Date and Time

Object	Description
Current Time	Show the current time. User is able to set time and date manually.
Time Zone Select	Select the time zone of the country you are currently in. The router will set its time based on your selection.
NTP Client Update	Once this function is enabled, router will automatically update current time from NTP server.
NTP Server	User may use the default NTP sever or input NTP server manually.

4.5.3 Saving/Restoring Configuration

This page shows the status of the configuration. You may save the setting file to either USB storage or PC and load the setting file from USB storage or PC as [Figure 4-58](#) is shown below:

Figure 4-58: Save/Restore Configuration

■ Save Setting to PC

Object	Description
Configuration Export	Press the  button to save setting file to PC.
Configuration Import	Press the  button to select the setting file, and then press the  button to upload setting file from PC.

4.5.4 Firmware Upgrading

This page provides the firmware upgrade of the router as shown in [Figure 4-59](#).

Firmware Information

Firmware Version	v2.2102b210922
Last Upgrade Date	N/A

Firmware Upgrade

Select File No file chosen

Figure 4-59: Firmware upgrade

Object	Description
Choose File	Press the button to select the firmware.
Upgrade	Press the button to upgrade firmware to system.

4.5.5 Reboot / Reset

This page enables the device to be rebooted from a remote location. Once the Reboot button is pressed, users have to re-log in the Web interface as [Figure 4-60](#) is shown below:

Reboot / Reset

Reboot Button

Reset Button

I'd like to keep the network profiles.
Keep your current network profiles and reset all other configuration to factory defaults.

Figure 4-60: Reboot/Reset

Object	Description
Reboot	Press the button to reboot system.
Reset	Press the button to restore all settings to factory default settings.
I'd like to keep the network profiles.	Check the box and then press the <input type="button" value="Reset to Default"/> button to keep the current network profiles and reset all other configurations to factory defaults.

Object	Description
Auto Reboot	Disable or enable the Auto Reboot function.
Reboot Type	Set the function type.
Time	Select reboot time for clock

4.5.7 Diagnostics

The page allows you to issue ICMP PING packets to troubleshoot IP connectivity issues. After you press "Ping", ICMP packets are transmitted, and the sequence number and roundtrip time are displayed upon reception of a reply. The Page refreshes automatically until responses to all packets are received, or until a timeout occurs. The ICMP Ping is shown in [Figure 4-62](#).

Figure 4-62: Ping

Object	Description
Interface	Select an interface of the router.
Target Host	The destination IP Address or domain.
Number of Packets	Set the number of packets that will be transmitted; the maximum is 100.
Ping	The time of ping.

Figure 4-63: Trace Route

Object	Description
Target Host	The destination IP Address or domain.
Trace	The time of ping.

Be sure the target IP address is within the same network subnet of the router, or you have to set up the correct gateway IP address.

Chapter 5. Quick Connection to a Wireless Network

In the following sections, the **default SSID** of the WDAP-C1800AX is configured to “**default**”.

5.1 Windows XP (Wireless Zero Configuration)

Step 1: Right-click on the **wireless network icon** displayed in the system tray

Figure 5-1 System Tray – Wireless Network Icon

Step 2: Select [View Available Wireless Networks]

Step 3: Highlight and select the wireless network (SSID) to connect

- (1) Select SSID [default]
- (2) Click the [**Connect**] button

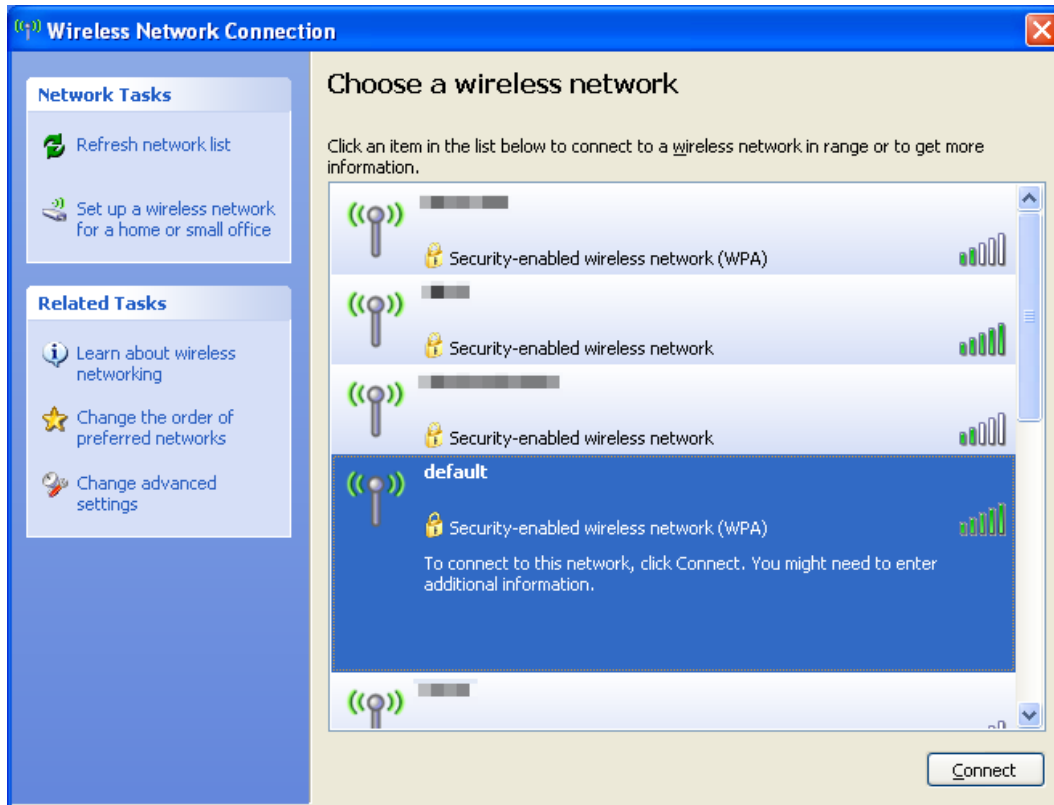

Figure 5-1 Choosing a Wireless Network

Step 4: Enter the **encryption key** of the wireless AP

- (1) The Wireless Network Connection box will appear
- (2) Enter the encryption key that is configured in [section 5.7.2.1](#)
- (3) Click the [Connect] button

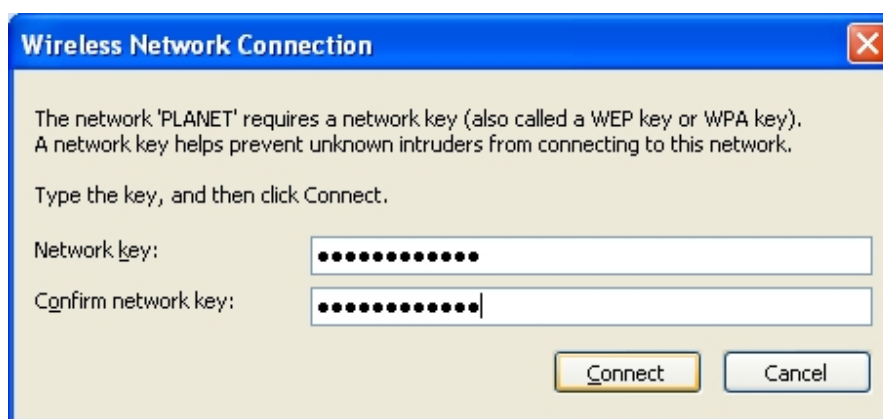

Figure 5-2 Entering the Network Key

Step 5: Check if **“Connected”** is displayed

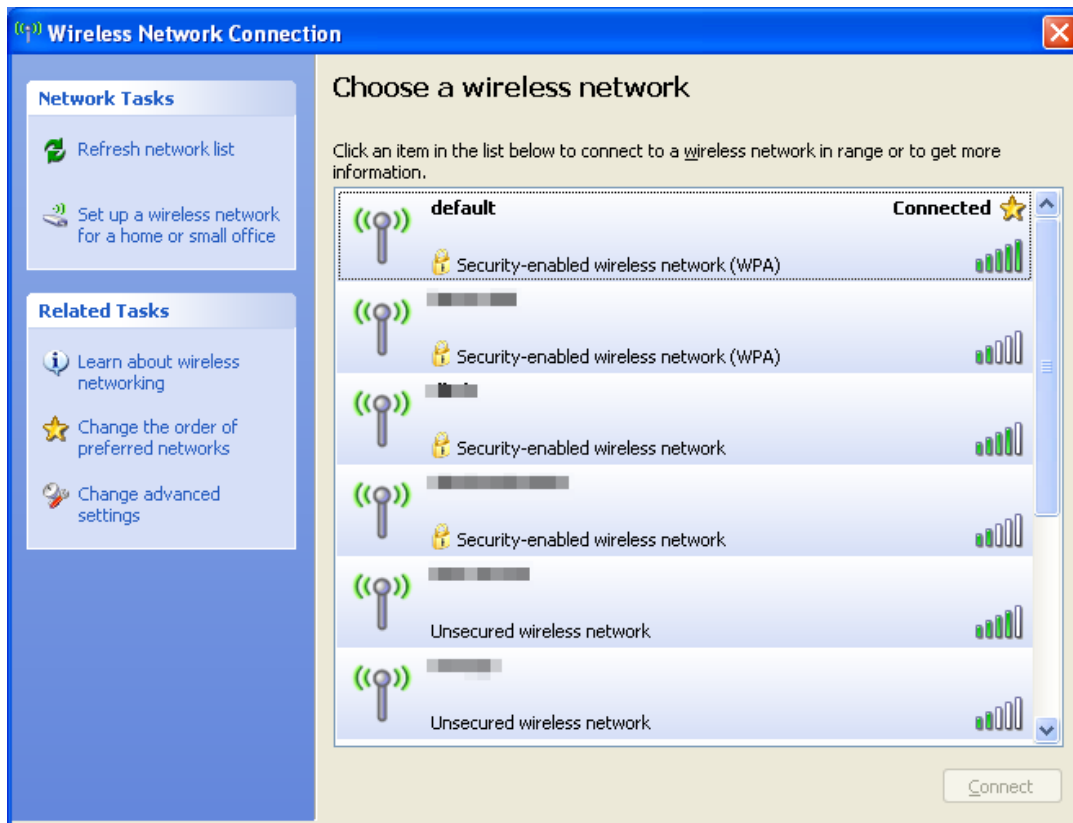

Figure 5-3 Choosing a Wireless Network -- Connected

Some laptops are equipped with a “Wireless ON/OFF” switch for the internal wireless LAN. Make sure the hardware wireless switch is switched to “ON” position.

5.2 Windows 7/8/10 (WLAN AutoConfig)

WLAN AutoConfig service is built-in in Windows 7 that can be used to detect and connect to wireless network. This built-in wireless network connection tool is similar to wireless zero configuration tool in Windows XP.

Step 1: Right-click on the **network icon** displayed in the system tray

Figure 5-4 Network Icon

Step 2: Highlight and select the wireless network (SSID) to connect

- (1) Select SSID [**default**]
- (2) Click the [**Connect**] button

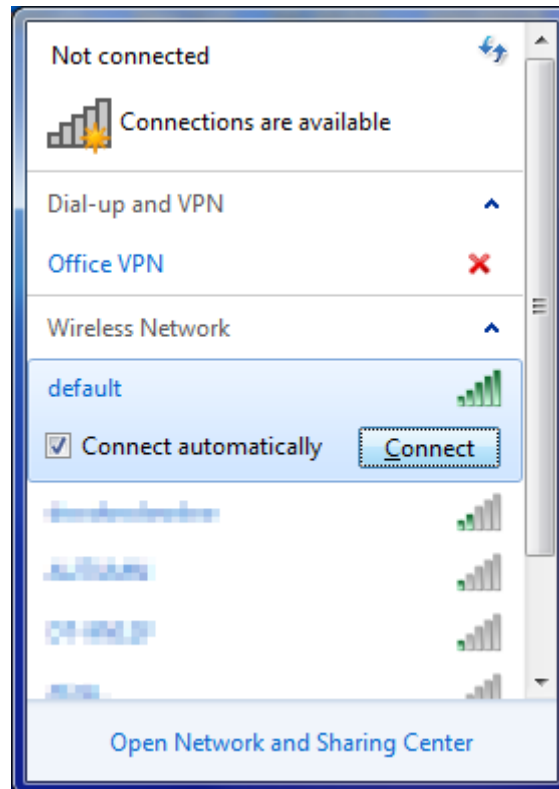

Figure 5-5 WLAN AutoConfig

If you will be connecting to this Wireless AP in the future, check [**Connect automatically**].

Step 4: Enter the **encryption key** of the wireless AP

- (1) The Connect to a Network box will appear.
- (2) Enter the encryption key that is configured in [section 5.7.2.1](#)
- (3) Click the [OK] button.

Figure 5-6 Typing the Network Key

Figure 5-7 Connecting to a Network

Step 5: Check if **“Connected”** is displayed.

Figure 5-8 Connected to a Network

5.3 Mac OS X 10.x

In the following sections, the default SSID of the WDAP series is configured to “default”.

Step 1: Right-click on the **network icon** displayed in the system tray

The AirPort Network Connection menu will appear.

Figure 5-9 Mac OS – Network Icon

Step 2: Highlight and select the wireless network (SSID) to connect

- (1) Select and SSID [**default**].
- (2) Double-click on the selected SSID.

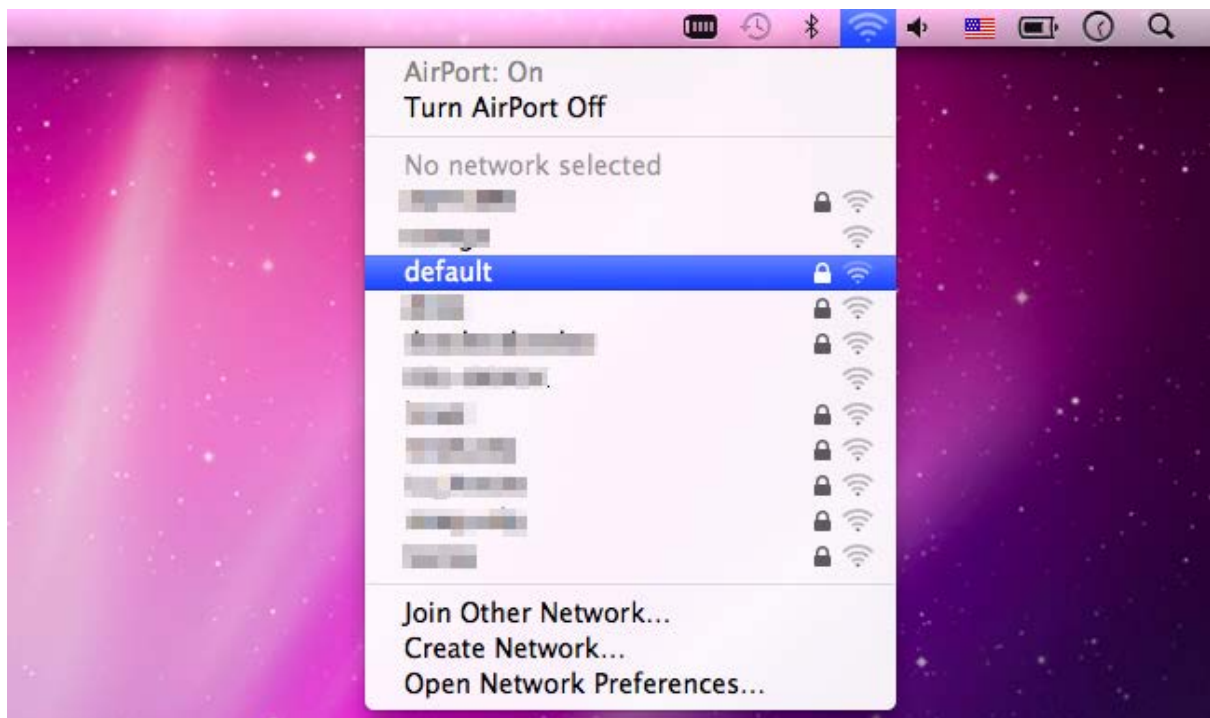

Figure 5-10 Highlighting and Selecting the Wireless Network

Step 4: Enter the **encryption key** of the wireless AP

- (1) Enter the encryption key that is configured in [section 5.7.2.1](#)
- (2) Click the [OK] button.

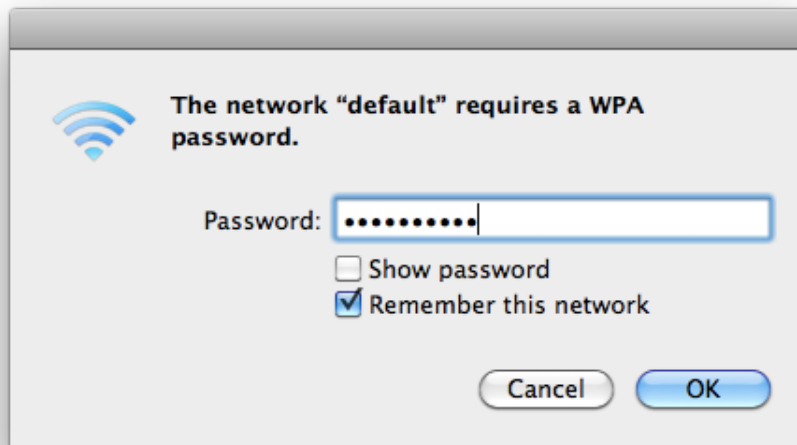

Figure 5-11 Enter the Password

If you will be connecting to this Wireless AP in the future, check [**Remember this network**].

Step 5: Check if the AirPort is connected to the selected wireless network.

If “Yes”, then there will be a “check” symbol in front of the SSID.

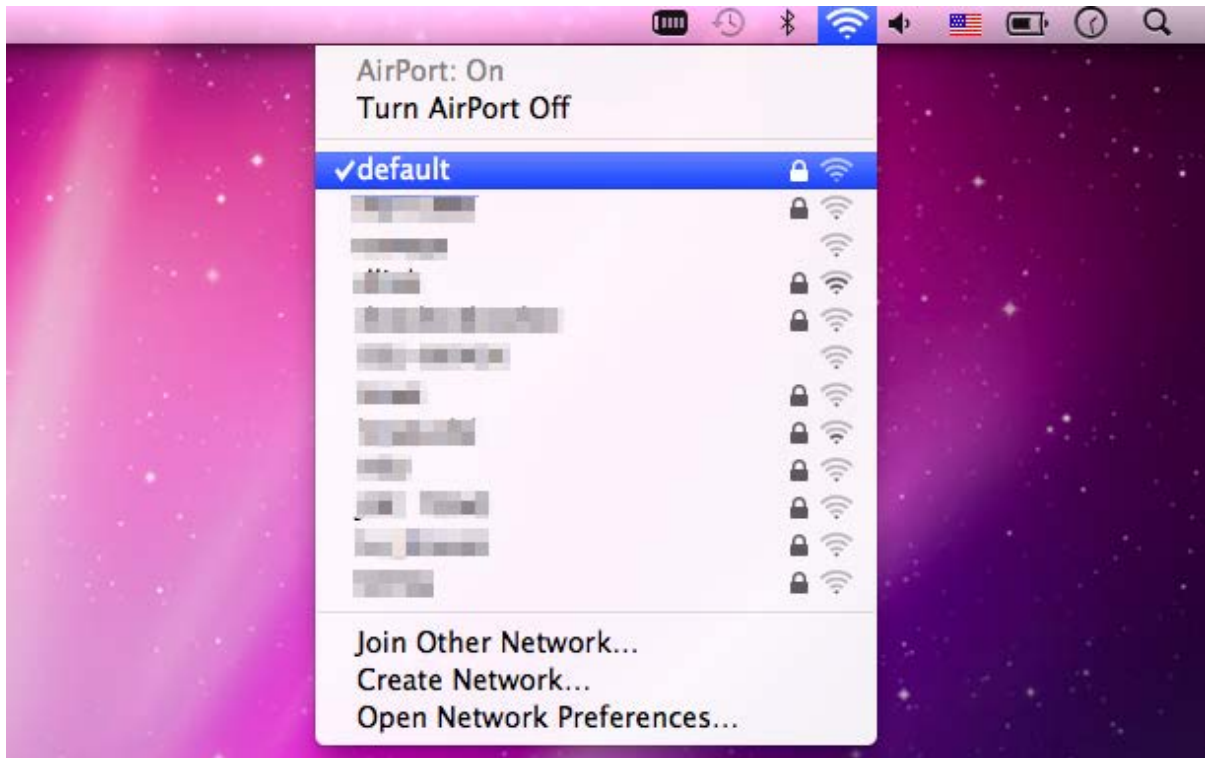

Figure 5-12 Connected to the Network

There is another way to configure the MAC OS X wireless settings:

Step 1: Click and open the [System Preferences] by going to **Apple > System Preference** or **Applications**

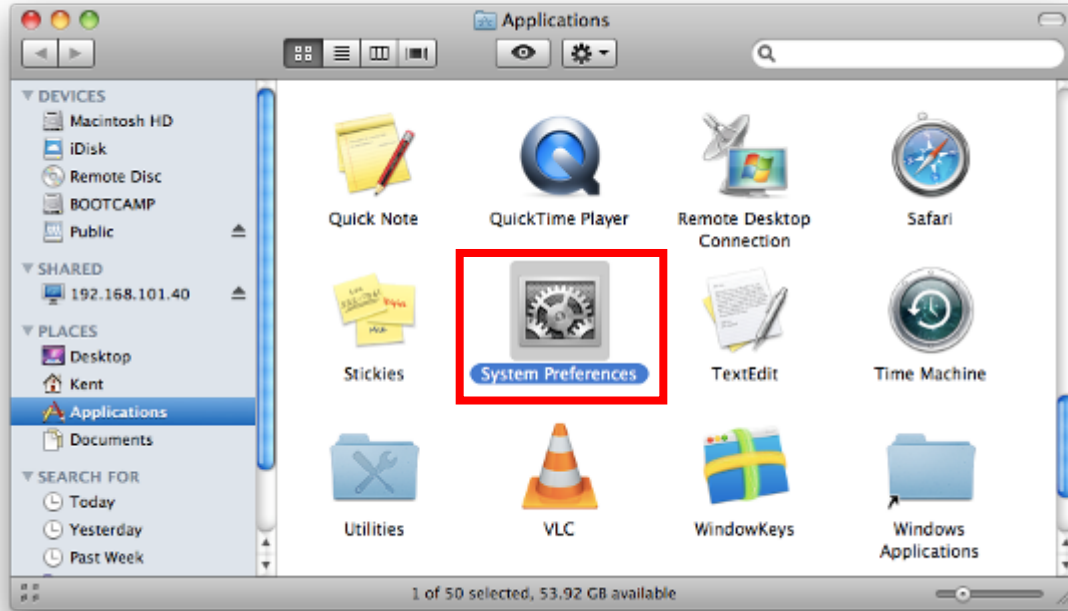

Figure 5-13 System Preferences

Step 2: Open **Network Preference** by clicking on the [Network] icon

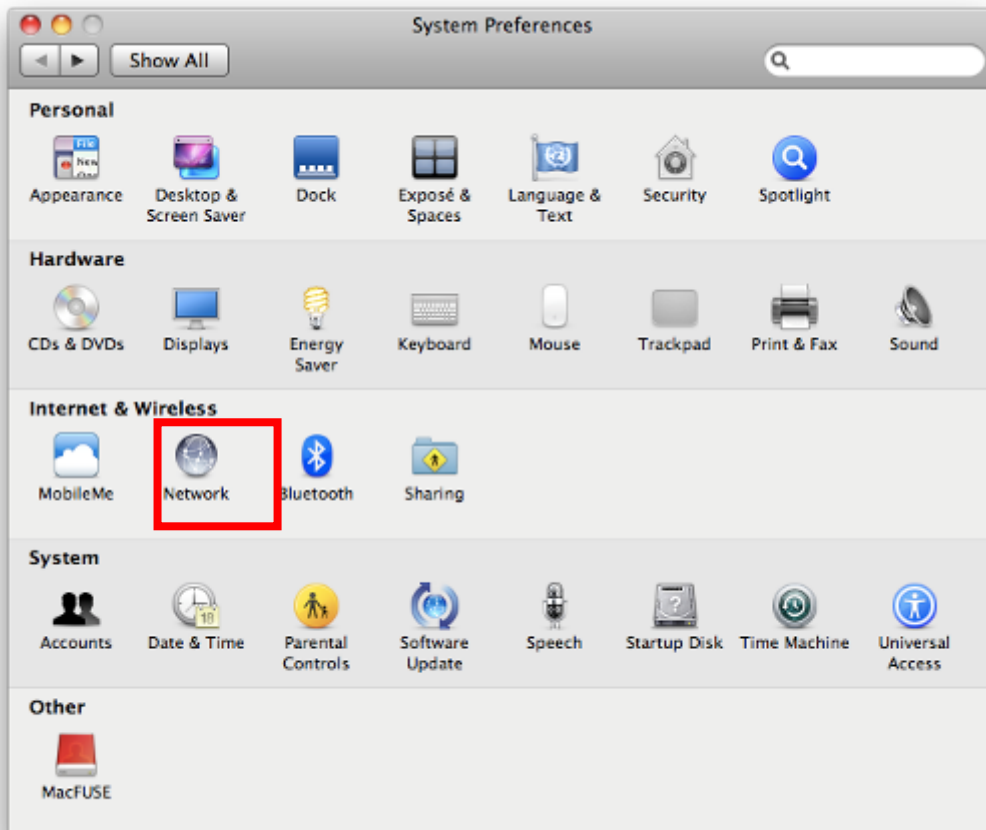

Figure 5-14 System Preferences -- Network

Step 3: Check Wi-Fi setting and select the available wireless network

- (1) Choose the **AirPort** on the left menu (make sure it is ON)
- (2) Select Network Name [**default**] here

If this is the first time to connect to the Wireless AP, it should show “No network selected”.

Figure 5-15 Selecting the Wireless Network

5.4 iPhone/iPod Touch/iPad

In the following sections, the **default SSID** of the WDAP series is configured to “**default**”.

Step 1: Tap the [Settings] icon displayed in the home screen

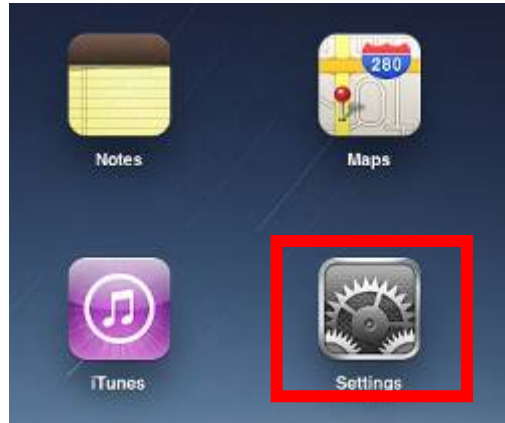

Figure 5-16 iPhone – Settings icon

Step 2: Check Wi-Fi setting and select the available wireless network

- (1) Tap [General] \ [Network]
- (2) Tap [Wi-Fi]

If this is the first time to connect to the Wireless AP, it should show “Not Connected”.

Figure 5-17 Wi-Fi Setting

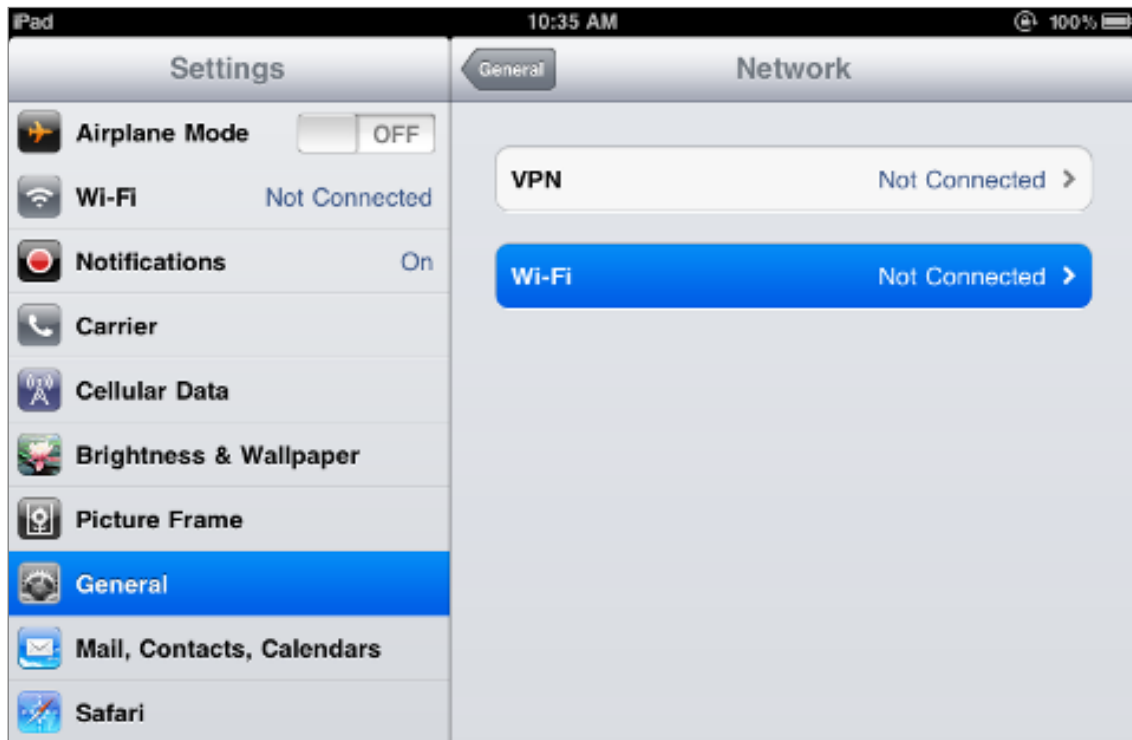

Figure 5-18 Wi-Fi Setting – Not Connected

Step 3: Tap the target wireless network (SSID) in “Choose a Network...”

- (1) Turn on Wi-Fi by tapping “Wi-Fi”
- (2) Select SSID [default]

Figure 5-19 Turning on Wi-Fi

Step 4: Enter the **encryption key** of the Wireless AP

- (1) The password input screen will be displayed.
- (2) Enter the encryption key that is configured in [section 5.7.2.1](#)
- (3) Tap the [**Join**] button.

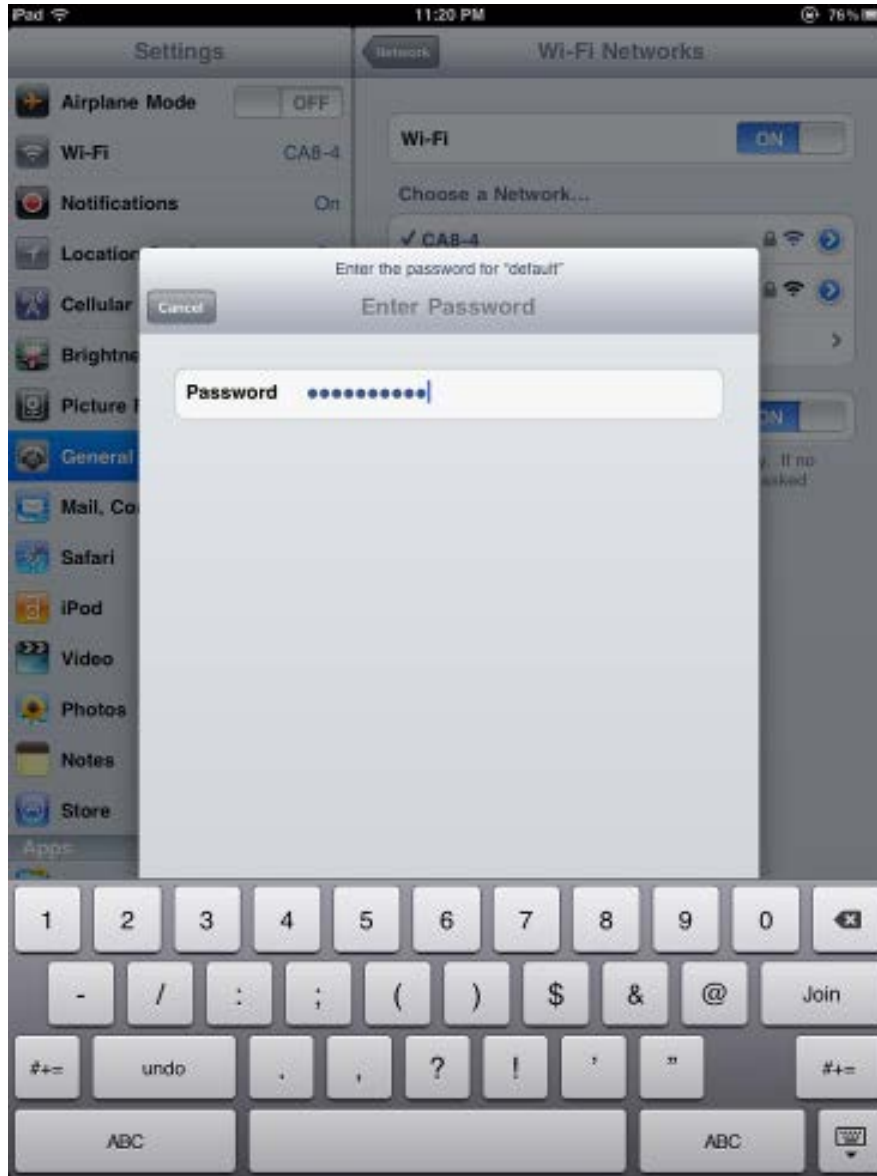

Figure 5-20 iPhone -- Entering the Password

Step 5: Check if the device is connected to the selected wireless network.

If “Yes”, then there will be a “check” symbol in front of the SSID.

Figure 5-21 iPhone -- Connected to the Network

Appendix A: DDNS Application

Configuring PLANET DDNS steps:

Step 1: Visit DDNS provider's web site and register an account if you do not have one yet. For example, register an account at <http://planetddns.com>

Step 2: Enable DDNS option through accessing web page of the device.

Step 3: Input all DDNS settings.

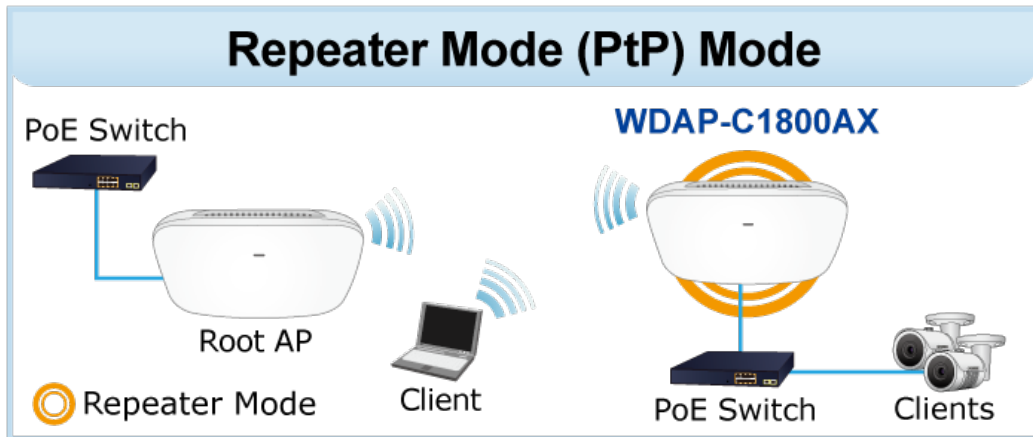

The screenshot displays the PLANET DDNS website. At the top, there is a navigation bar with the PLANET logo and links for 'PLANET Website', 'FAQ', and 'Support'. The main content area features a 'Sign in' form with fields for 'ID / Email' and a password, a 'Sign in' button, and links for 'Forgotten Password' and 'Create A New Account'. Below the form, there are three product cards: 'XRT-401F Internet Broadband Router', 'ICA-HM132 2 Mega-Pixel 20M IR Vari-Focal Dome IP Camera', and 'ICA-HM316 2 Mega-Pixel 11n Outdoor IR IP Camera', each with a 'More Info' button. At the bottom, there are two sections: 'Access anytime & anywhere' with a brief description and 'Support & Download' with a 'Go!' button. The footer contains the text 'About DDNS | Term of Usage' and 'PLANET Technology Corp. Copyright ©2012 All Rights Reserved.'

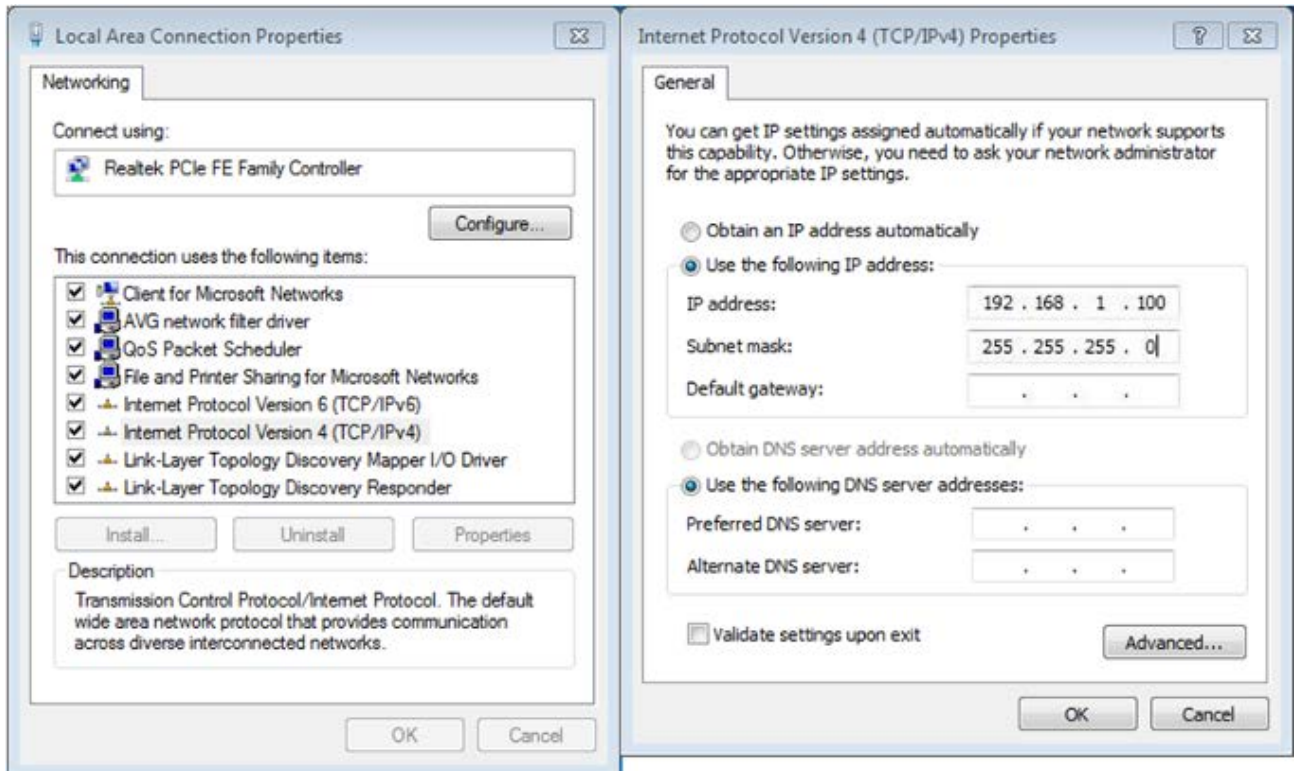

Appendix B: FAQs

How to Set Up the AP Client Connection

Topology (The topology below uses the WDAP-C1800AX as an example):

Step 1. Use static IP in the PCs that are connected with AP-1(Site-1) and AP-2(Site-2). In this case, Site-1 is “192.168.1.100”, and Site-2 is “192.168.1.200”.

Step 2. In AP-2, change the default IP to the same IP range but different from AP-1. In this case, the IP is changed to 192.168.1.252.

LAN Configuration

IP Address	192.168.1.252
Netmask	255.255.255.0
Gateway	192.168.1.1
Primary DNS	8.8.8.8
Secondary DNS	8.8.4.4

Apply Settings Cancel Changes

Step 3. In AP-1, go to “Wizard” to configure it to **AP Mode**. In AP-2, configure it to **Repeater Mode**.
AP-1

AP-2

Step 4. In AP-2, press “**Scan** “ to search the AP-1. You can also enter the MAC address, SSID, encryption and bandwidth if you know what they are.

2.4G WiFi Enable: ON SSID: PLANET_2.4G Bandwidth: 20MHz Channel: 6 Encryption: Open Hide SSID: Disable

5G WiFi Enable: ON SSID: PLANET_5G Bandwidth: 80MHz Channel: 36 Encryption: Open Hide SSID: Disable

Step 7. Use command line tool to ping each other to ensure the link is successfully established. From Site-1, ping 192.168.1.200; and in Site-2, ping 192.168.1.100.

```

C:\WINDOWS\system32\CMD.exe - ping 192.168.1.100 -t
Destination host unreachable.
Destination host unreachable.
Destination host unreachable.
Destination host unreachable.
Destination host unreachable.

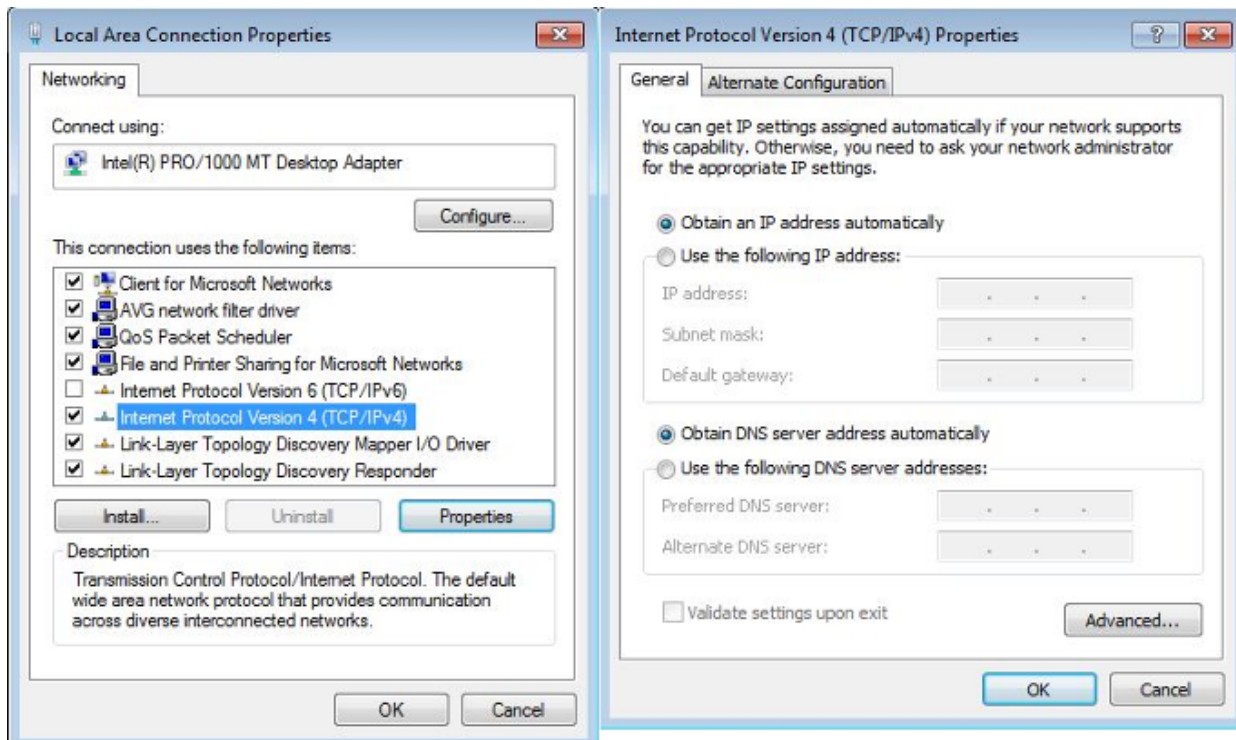

Ping statistics for 192.168.0.100:
    Packets: Sent = 25, Received = 0, Lost = 25 (100% loss),
Control-C
^C
C:\Documents and Settings\Administrator>ping 192.168.1.100 -t

Pinging 192.168.1.100 with 32 bytes of data:

Request timed out.
Reply from 192.168.1.100: bytes=32 time=7ms TTL=128
Reply from 192.168.1.100: bytes=32 time=1ms TTL=128
Reply from 192.168.1.100: bytes=32 time=2ms TTL=128
Reply from 192.168.1.100: bytes=32 time=1ms TTL=128
Reply from 192.168.1.100: bytes=32 time=2ms TTL=128

```

- The following hints should be noted:
- 1) The encryption method must be the same as that of both sites if configured.
 - 2) Both sites should be Line-of-Sight.
 - 3) For the short distance connection less than 1km, please reduce the "RF Output Power" of both sites.
 - 4) For the long distance connection over 1km, please adjust the "Distance" to the actual distance or double the actual distance.

Appendix C: Troubleshooting

If you find the AP is working improperly or stop responding to you, please read this troubleshooting first before contacting the dealer for help. Some problems can be solved by yourself within a very short time.

Scenario	Solution
<p>The AP is not responding to me when I want to access it by Web browser.</p>	<ol style="list-style-type: none"> a. Please check the connection of the power cord and the Ethernet cable of this AP. All cords and cables should be correctly and firmly inserted into the AP. b. If all LEDs on this AP are off, please check the status of power adapter, and make sure it is correctly powered. c. You must use the same IP address section which AP uses. d. Are you using MAC or IP address filter? Try to connect the AP by another computer and see if it works; if not, please reset the AP to the factory default settings by pressing the 'reset' button for over 7 seconds. e. Use the Smart Discovery Tool to see if you can find the AP or not. f. If you did a firmware upgrade and this happens, contact your dealer of purchase for help. g. If all the solutions above don't work, contact the dealer for help.
<p>I can't get connected to the Internet.</p>	<ol style="list-style-type: none"> a. Go to 'Status' -> 'Internet Connection' menu on the router connected to the AP, and check Internet connection status. b. Please be patient. Sometimes Internet is just that slow. c. If you've connected a computer to Internet directly before, try to do that again, and check if you can get connected to Internet with your computer directly attached to the device provided by your Internet service provider. d. Check PPPoE / L2TP / PPTP user ID and password entered in the router's settings again. e. Call your Internet service provider and check if there's

Scenario	Solution
	<p>something wrong with their service.</p> <ul style="list-style-type: none"> f. If you just can't connect to one or more website, but you can still use other internet services, please check URL/Keyword filter. g. Try to reset the AP and try again later. h. Reset the device provided by your Internet service provider too. i. Try to use IP address instead of host name. If you can use IP address to communicate with a remote server, but can't use host name, please check DNS setting.
<p>I can't locate my AP by my wireless device.</p>	<ul style="list-style-type: none"> a. 'Broadcast ESSID' set to off? b. Both two antennas are properly secured. c. Are you too far from your AP? Try to get closer. d. Please remember that you have to input ESSID on your wireless client manually, if ESSID broadcast is disabled.
<p>File downloading is very slow or breaks frequently.</p>	<ul style="list-style-type: none"> a. Internet is slow sometimes. Please be patient. b. Try to reset the AP and see if it's better after that. c. Try to know what computers do on your local network. If someone's transferring big files, other people will think Internet is really slow. d. If this never happens before, call you Internet service provider to know if there is something wrong with their network.
<p>I can't log into the web management interface; the password is wrong.</p>	<ul style="list-style-type: none"> a. Make sure you're connecting to the correct IP address of the AP. b. Password is case-sensitive. Make sure the 'Caps Lock' light is not illuminated. c. If you really forget the password, do a hard reset.
<p>The AP becomes hot</p>	<ul style="list-style-type: none"> a. This is not a malfunction, if you can keep your hand on the AP's case. b. If you smell something wrong or see the smoke coming out from AP or A/C power adapter, please disconnect the AP and power source from utility power (make sure it's safe before you're doing this), and call your dealer of purchase for help.

Appendix D: Glossary

- **802.11ax** - 802.11ax is a wireless networking standard in the 802.11 family by adding OFDMA, MU-MIMO (which is marketed under the brand name Wi-Fi 6), developed in the IEEE Standards Association process, providing high-throughput wireless local area networks (WLANs) on the 5GHz band 20、40、80、160MHz.
- **802.11ac** - 802.11ac is a wireless networking standard in the 802.11 family by adding MU-MIMO (which is marketed under the brand name Wi-Fi 5), developed in the IEEE Standards Association process, providing high-throughput wireless local area networks (WLANs) on the 5GHz band.
- **802.11n** - 802.11n builds upon previous 802.11 standards by adding MIMO (multiple-input multiple-output). MIMO uses multiple transmitter and receiver antennas to allow for increased data throughput via spatial multiplexing and increased range by exploiting the spatial diversity, perhaps through coding schemes like Alamouti coding. The Enhanced Wireless Consortium (EWC) [3] was formed to help accelerate the IEEE 802.11n development process and promote a technology specification for interoperability of next-generation wireless local area networking (WLAN) products.
- **802.11a** - 802.11a was an amendment to the IEEE 802.11 wireless local network specifications that defined requirements for an orthogonal frequency division multiplexing (OFDM) communication system. It was originally designed to support wireless communication in the unlicensed national information infrastructure (U-NII) bands (in the 5–6 GHz frequency range) as regulated in the United States by the Code of Federal Regulations, Title 47, Section 15.407.
- **802.11b** - The 802.11b standard specifies a wireless networking at 11 Mbps using direct-sequence spread-spectrum (DSSS) technology and operating in the unlicensed radio spectrum at 2.4GHzHz, and WEP encryption for security. 802.11b networks are also referred to as Wi-Fi networks.
- **802.11g** - specification for wireless networking at 54 Mbps using direct-sequence spread-spectrum (DSSS) technology, using OFDM modulation and operating in the unlicensed radio spectrum at 2.4GHzHz, and backward compatibility with IEEE 802.11b devices, and WEP encryption for security.
- **DDNS (Dynamic Domain Name System)** - The capability of assigning a fixed host and domain name to a dynamic Internet IP Address.
- **DHCP (Dynamic Host Configuration Protocol)** - A protocol that automatically configure the

TCP/IP parameters for the all the PC(s) that are connected to a DHCP server.

- **DMZ (Demilitarized Zone)** - A Demilitarized Zone allows one local host to be exposed to the Internet for a special-purpose service such as Internet gaming or videoconferencing.
- **DNS (Domain Name System)** - An Internet Service that translates the names of websites into IP addresses.
- **Domain Name** - A descriptive name for an address or group of addresses on the Internet.
- **DSL (Digital Subscriber Line)** - A technology that allows data to be sent or received over existing traditional phone lines.
- **MTU (Maximum Transmission Unit)** - The size in bytes of the largest packet that can be transmitted.
- **NAT (Network Address Translation)** - NAT technology translates IP addresses of a local area network to a different IP address for the Internet.
- **PPPoE (Point to Point Protocol over Ethernet)** - PPPoE is a protocol for connecting remote hosts to the Internet over an always-on connection by simulating a dial-up connection.
- **SSID** - A **S**ervice **S**et **I**dentification is a thirty-two character (maximum) alphanumeric key identifying a wireless local area network. For the wireless devices in a network to communicate with each other, all devices must be configured with the same SSID. This is typically the configuration parameter for a wireless PC card. It corresponds to the ESSID in the wireless Access Point and to the wireless network name.
- **WEP (Wired Equivalent Privacy)** - A data privacy mechanism based on a 64-bit or 128-bit or 152-bit shared key algorithm, as described in the IEEE 802.11 standard.
- **Wi-Fi** - A trade name for the 802.11b wireless networking standard, given by the Wireless Ethernet Compatibility Alliance (WECA, see <http://www.wi-fi.net>), an industry standards group promoting interoperability among 802.11b devices.
- **WLAN (Wireless Local Area Network)** - A group of computers and associated devices communicate with each other wirelessly, which network serving users are limited in a local area.

EC Declaration of Conformity

English	Hereby, PLANET Technology Corporation , declares that this 11ac Wireless AP is in compliance with the essential requirements and other relevant provisions of Directive 2014/53/EU.
